

PowerUp with PowerApps Briefing

Spreadsheets are an amazing tool, but they are a poor business application for managing any kind of relationships. Microsoft Access was often a better solution, but as a legacy desktop technology, it has some unacceptable limitations in today's world.

It does not take long to outgrow a Microsoft Excel or Microsoft Access based application. A common question we are asked is whether there are any options other than a full-blown enterprise CRM solution.

You can read more about the challenges of spreadsheet-based solutions [here](#).

Purpose of this Briefing

This no-obligation informational briefing is designed to review what you are doing with Excel or Access today and see if *Microsoft's Power Platform* could do a better job.

- The Power Platform includes Power Apps, Power BI, Power Automate and Power Virtual Agents.
- These applications all run on the Common Data Service (CDS) platform.
- Global Scale, Enterprise level Security and Compliance, and Mobile Enabled.

Deliverables

What does this Briefing include?

This is a one-hour phone call with a Power Platform expert to accomplish the following items:

- Review your existing Microsoft Excel or Microsoft Access based business processes
- Discuss your current goals and limitations
- Review the alternatives and approaches with Power Platform
- Review the licensing options and costs
- Discuss the "Citizen Developer" capabilities
- Discuss potential configuration costs and time
- Provide you with links to specific resources based on the discovery

This Briefing is offered by [Forceworks Global](#). Led by a [Microsoft MVP](#), Forceworks is a recognized global leader for Microsoft's Power Platform.

This is an informational briefing for Line of Business owners or decision makers, it is not tutoring for users, or a sales call.
