

## Unleash the Power of the Teams Application Platform

### Quickly Experience the Value of Teams Application Platform

Microsoft Teams is much more than a 1:1 replacement for Skype for Business. The possibilities are virtually endless to extend your collaboration platform by building custom apps, bots, and integrations into your line of business systems. Microsoft App templates provide a great starting point for any organization interested in jumpstarting a Teams solution by building Bots, Connectors, Messaging Extensions, and more.

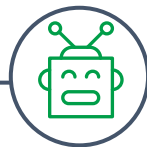

In this three-day engagement, Intellinet will work with business stakeholders to help identify opportunities to leverage **Microsoft's Pre-Built Teams App Templates**. We will work with your team to match business use-cases to an app template, deploy the template into your environment, and outline a plan for future customization for your specific needs.

#### Day 1 - Discovery

- Review of the Microsoft Teams App Templates features and capabilities
- Discovery session to align business intent, focusing on existing apps and pain points that may benefit from a custom solution in Microsoft Teams
- Identify the app accelerator to deploy
- Roadmap to extend accelerator to future use cases

**Deliverable:** High level design and use case documentation

#### Day 2 & 3 – POC Deployment

- Day 2: Using the app accelerator selected on Day 1, we will deploy a solution that demonstrates the benefits of a Teams custom app
- Day 3: Deploy a working POC application into your Office 365/Azure environment

**Deliverable:** Working POC app, deployed to Azure tenant

### App Accelerator Today, Greater Teams Value Tomorrow

App templates for deployment and customization include; celebrations, company communicator, FAQ, HR support, list search, custom stickers, icebreaker bot, scrum status bot, and more!
