

## Replenishment & Kanban Bin for Microsoft Dynamics 365 Business Central

**Your company is operating in trade or production and has warehouse locations that are organized in "replenishment areas" and "picking areas"? Automate the warehouse bin transfer between these two areas:**

**The "Replenishment & Kanban Bin" app from KUMAVISION**, based on Microsoft Dynamics 365 Business Central, supports you in the consumption-based warehouse bin transfer of material. Defined warehouse areas can be filled automatically - even without a "directed put-away and pick" warehouse.

### Practical examples

**Trade:** Relocation to high-rack warehouses - the goods are relocated to the lower bins, for example by forklift truck, in order to enable consistent order picking by employees without forklift trucks.

**Production:** Define a kanban area (consumption area) that is automatically filled from predefined replenishment areas.

### Highlights & Benefits

- Optimization of **warehouse processes**
- **Efficient organization** of your warehouse
- Fast and **flexible set up** of warehouse areas
- **Requirements-based** calculation of transfer quantities
- **Time saving** in the supply area
