

MANUFACTURO®

WHAT IS MANUFACTURO PLATFORM?

Manufacturo Platform is a cloud-based manufacturing solution that will optimize your production processes and leverage your company on the path to success. This innovative system offers both off-the-shelf solutions and an unlimited ability to develop new tailored applications, that could be introduced within just a few weeks, providing immediate value for the company. Manufacturo apps are a collection of services organized around business capabilities and are independently deployable. Furthermore, Manufacturo can easily integrate and enhance your existing enterprise or manufacturing systems.

INNOVATIVE

Manufacturo was created to change the way you buy, implement, and use manufacturing solutions. This platform was built using the microservices architecture that enables global manufacturing collaboration and the rapid implementation of Industrial IoT (IIoT).

It resembles the smartphone and app store concept, where the required applications can be purchased and installed, depending on the individual needs. With Manufacturo, even if none of the currently created apps meet the needs of the company, it can be easily developed.

TOTAL COST OF OWNERSHIP

What you get are value and unlimited possibilities. You do not need to worry about significant upfront software or implementation costs. The pricing model is predictable and easy to understand - you only pay for what you use. Infrastructure, security, and updates are delivered to you seamlessly and all covered by the subscription plan.

INSTANT VALUE

Manufacturo's main aim is to simplify the deployment and roll-out of manufacturing applications that will deliver real business value. Imagine being able to deploy new applications in weeks, not months, as compared to other solutions. With this tool, you can quickly adapt to the fast-changing business environment and ensure project success.

Why us?

MANUFACTURO®

FOR WHOM?

Manufacturo platform was designed for large manufacturing companies aiming to can get up and running much faster by deploying ready-to-use manufacturing applications, rather than implement the complex MES system. This approach can deliver benefits much faster, than the standard system's implementation.

MANUFACTURO eWorkin

The app was designed to streamline workflows, automate processes, and leverage the technology in mobile devices. eWorkin collects rich data for analysis and process improvement. Thanks to this employees are empowered by relevant info, they know what to do next, and how to do it.

MANUFACTURO eBox

eBox is a comprehensive equipment monitoring solution. The app tracks, performance, quality, availability, tasks, and alerts on any machine. The reports help eliminate the most common performance losses and predict unplanned downtimes in the future. Therefore, the immediate improvement of your shop floor performance can be achieved.

[Read More](#)

MANUFACTURO eKnows

The innovative application based on artificial intelligence streamlines maintenance tasks and allows the Operators to solve challenges on the production line without the support of the maintenance team. The system leads the operator step by step through issues identification by asking questions in order to provide solutions based on the experience gained during the machine learning process.

MAIN APPLICATIONS

Manufacturo Platform offers off the shelf applications that can be developed, depending on the needs. It also provides an opportunity for unlimited new solutions creation.

The apps can be used as standalone software, as a part of an enterprise solution, or integrate with existing manufacturing systems.

MANUFACTURO COVID-19 App

The speed of the implementation is a cherry on the top of our solutions. You can be certain that any new updates or functionality can be introduced faster and more convenient than ever before. Do you need proof? Take a look at our app that was **created in just 2 weeks!**

**Do you need a functionality
that no other system owns?**

**Let us know,
we will create it for you in a matter of
weeks!**
