

THE DATA GOVERNANCE SOLUTION FOR THE BIG DATA & MULTI-CLOUD ERA

Anjana Data is the innovative and disruptive, enterprise-ready Data Governance solution designed to help organizations in their data strategy roadmap implementation in the Big Data, Multi-Cloud and Data-Driven era

CONCERNED ABOUT THE GOVERNANCE OF YOUR DATA?

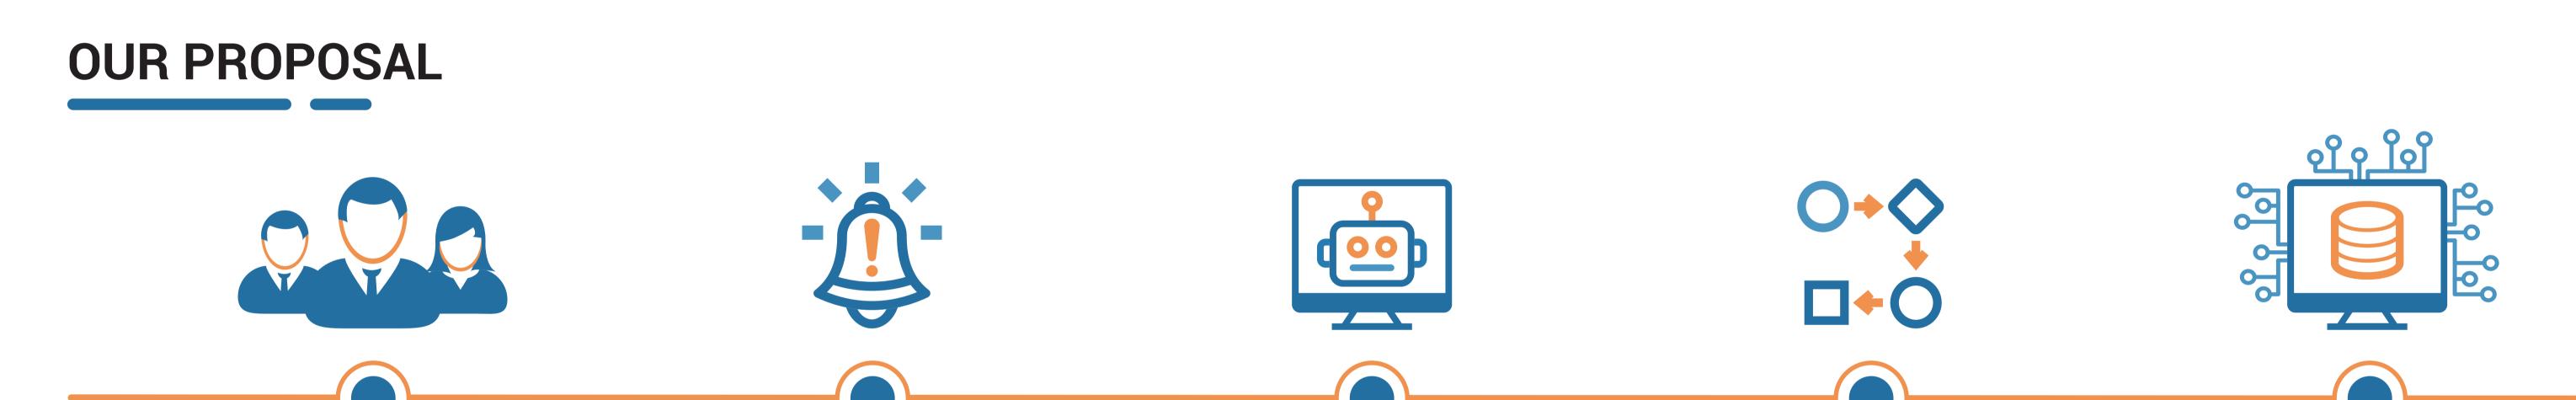

> You cannot operativize your data governance model

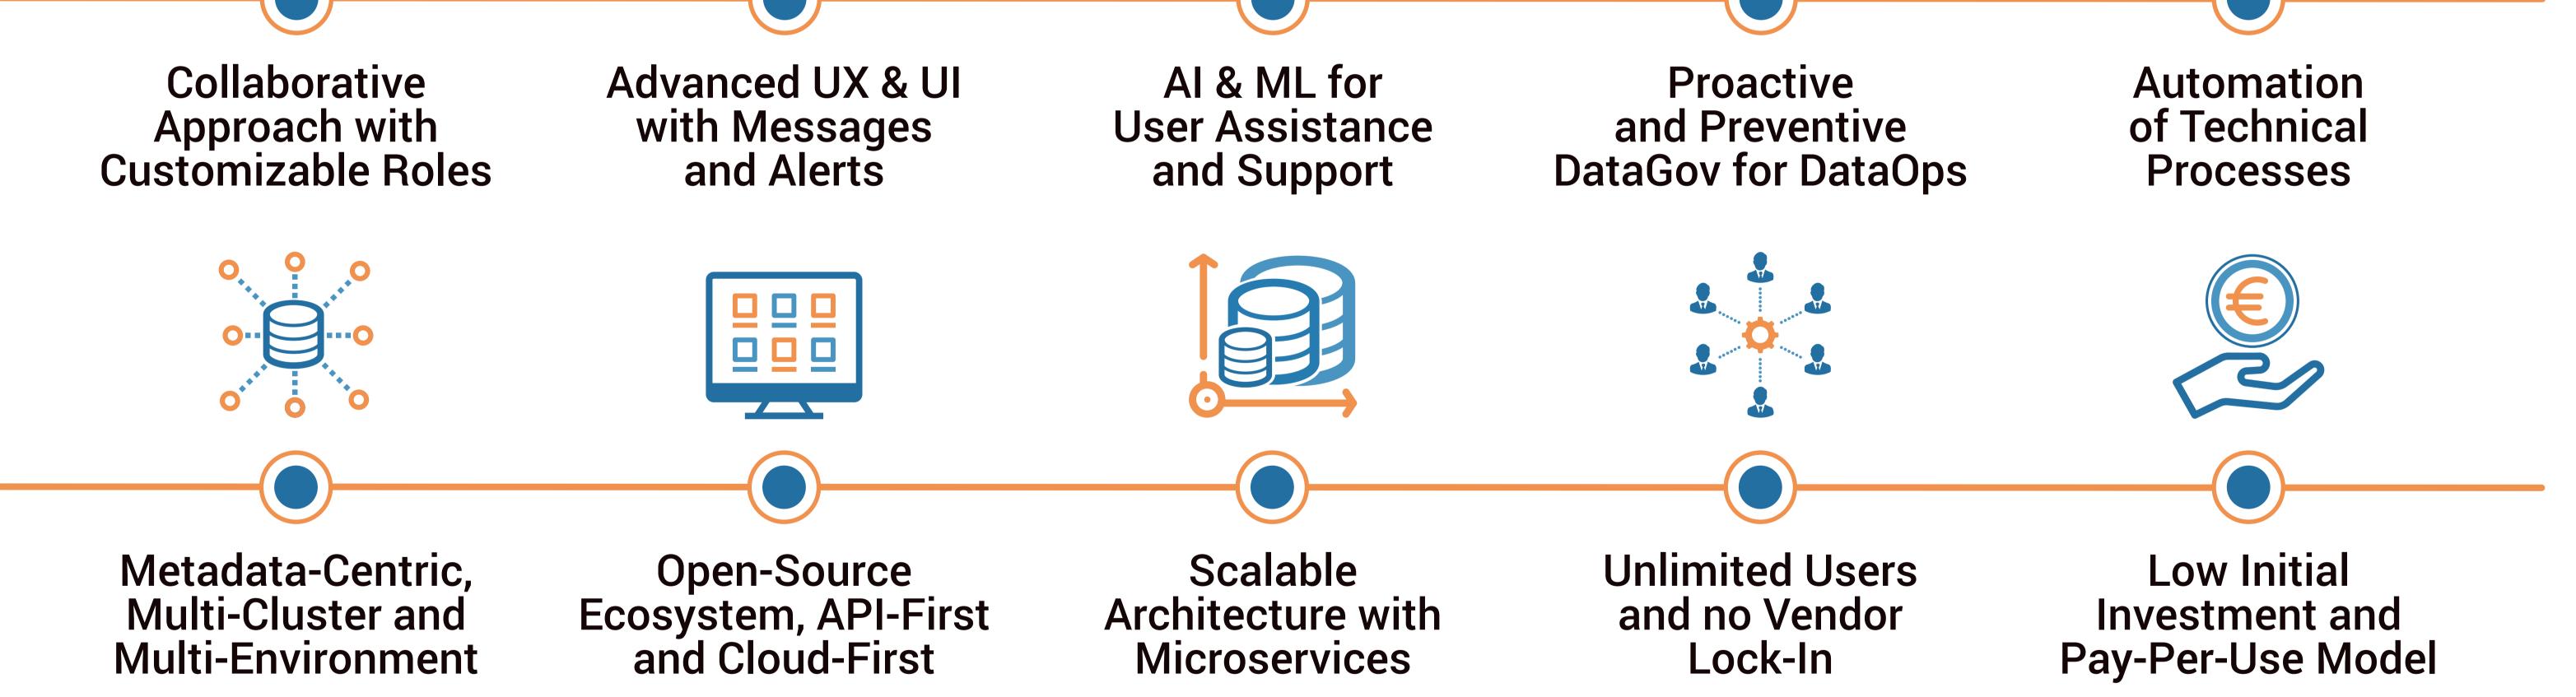

Walls between areas as well as between Business and IT

- > Plenty of data silos and diverse technologies
- > There is no data culture in the company
- > Business decisions based on poor quality data

- > Big Data, Cloud, Analytics look like "black boxes"
- > Data governance is understood as bureaucracy
- > Self-service data governance seems utopian

Do you identify yourself with any of these cases? Find out how Anjana Data can help you with your data strategy by changing the data governance vision in your Company

WHAT MAKES US DIFFERENT

Big Data native, services-oriented, scalable and interoperable, based on consolidated open-source technologies

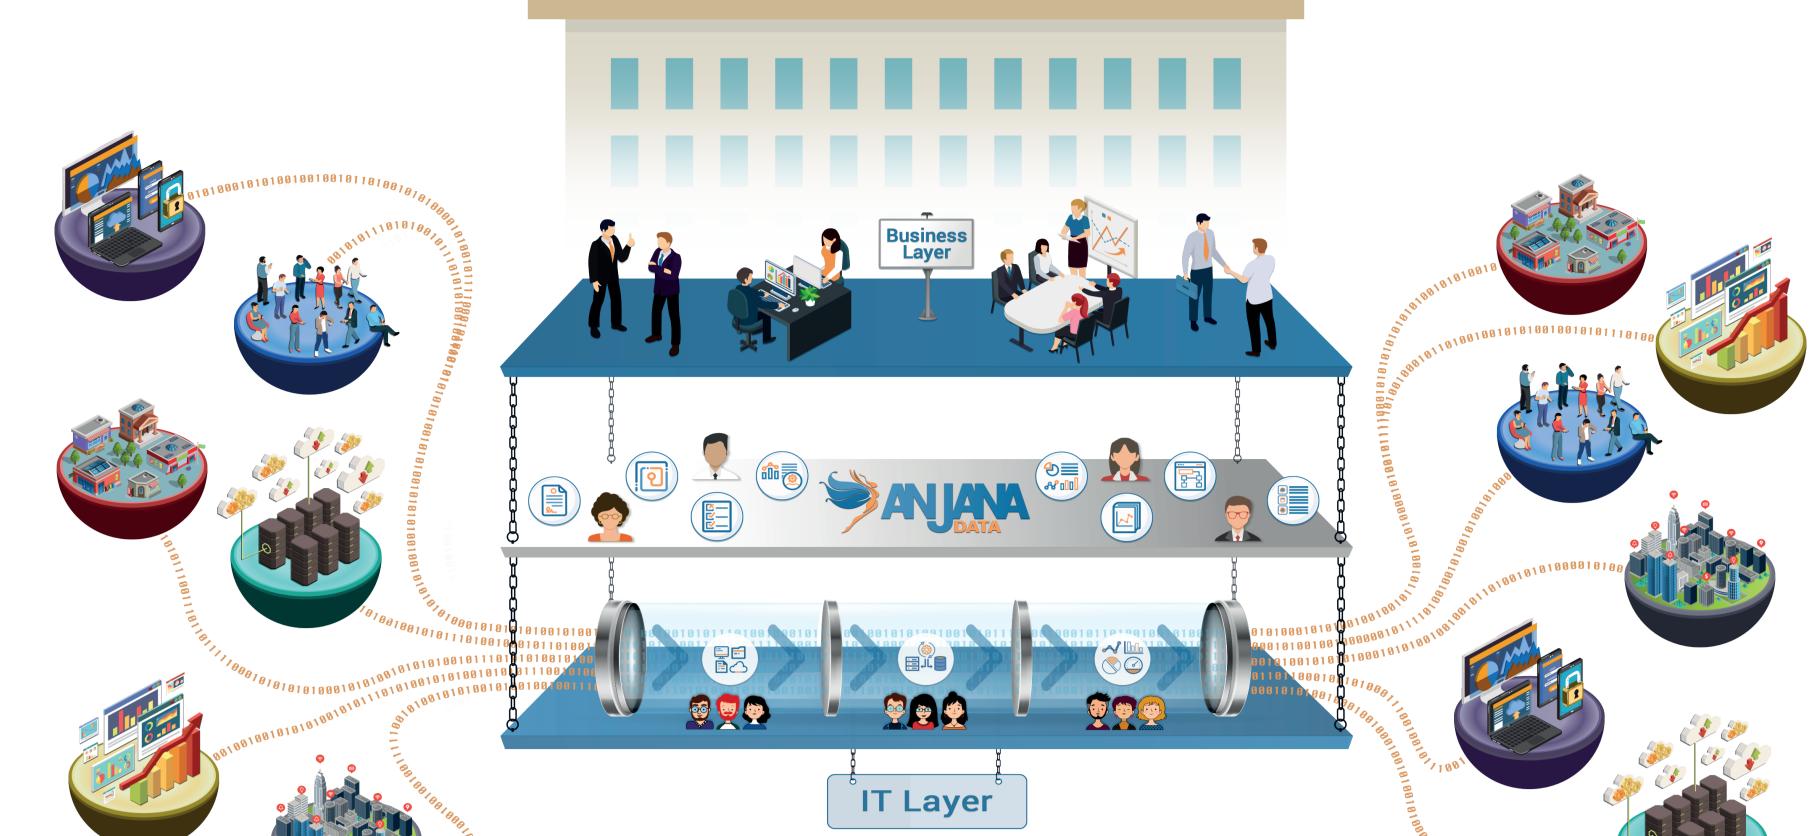

Collaborative metadata-centric approach for Data Governance Framework implementation Low initial investment, flexible and scalable pay-per-use licensing with no users limit

Avoid huge fines derived

Create actionable knowledge for competitive advantage generation

 Align data strategy with your organization strategy

Empower data stakeholders

WHAT IS AN ANJANA?

The Anjana is one of the best-known fairies of Cantabrian (a region in the north of Spain) mythology. These creatures live in the forests taking care about animals, trees, plants and streams and are recognised for being generous and protective of most people.

They use to guide those who lose their way in the forest and, when summoned for help, they accept if the summoner is good of heart, but they may punish the wicked too.

It seems that the Anjanas have some sort of data governance duties, doesn't it?
