

Internal corporate portal implementation

A corporate portal allows companies to create a convenient, modern environment for collaboration of employees. As a result, their motivation and labor productivity increase.

Why it is a unique solution?

SharePoint platform

Intranet provides a collection of exiting web parts that can be deployed in addition to any of your specific requirements onto the SharePoint platform.

Simple process of implementation

SMART business will develop an original design of portal, provide instruction on the native capabilities of SharePoint and support your staff with training and mentoring.

Reliable Microsoft platform

The product is based on Microsoft products. The use of these technologies indicates the constant quality and security of the solution.

Various sources of incoming information

The portal can combine information from various business systems and data sources: CRM, ERP, 1C, video hostings.

Corporate portal will help your company

Consolidate all internal corporate information in one place. Make employee access to it quick and convenient.

Increase the speed and efficiency of communication between employees.

Digitalize reporting. Get the ability to track business results online.

2020 Partner of the Year Winner, GE

What modules does corporate portal consist of?

Corporate news

All important news and events of the company are on the main page of the portal.

Intranet makes it possible to inform employees about important company events and relevant news, encourage participation in open discussions and engage the team in changing corporate culture.

Personal services

All operational tasks, statuses of applications submitted by an employee, and statuses of tasks assigned to an employee are visualized on the personal service page.

Calendar of events

The calendar contains the schedule of corporate events. An HR employee can add new events dividing them into different categories.

For perception convenience, each category can be assigned a unique corporate icon.

Personal work spaces

Permanent access to all documents according to roles and access rights.

The module enables efficient co-authoring of files, tracking the dynamics of making changes to documents, managing them from any device and providing secure access to colleagues.

Organizational structure

The company structure gains transparency and becomes clear to everyone: from "old-timers" to employees who have recently joined the team.

Centralized access to the structure makes it easy to find information by departments and employees.

Directory of employees

The employee's personal page contains both general information about them and information about their professional skills, which allows involving people in tasks that match their competencies.

Media library

The required photos can be easily found using the hierarchy of photo albums or filtering.

The video gallery module has convenient navigation by folders, and the selected files can be played both inside the corporate portal and using YouTube, Vimeo and other hosting services.

Office map

Is designed to display contact information of company offices.

It contains an interactive map with the locations of all offices and allows to add new geolocations without additional development.

Pharmaceutical Industry Leader Increased Operating Efficiency by 6.5%

Situation:

Over the past five years, YURiA PHARM has experienced a period of rapid growth with the opening of new representative offices and a 150% increase in staff number. As a result, difficulties in collaboration and communication between employees arose.

Solution:

To solve these problems, the internal IT department of YURiA PHARM turned to SMART business. Over six weeks of close collaboration, they introduced a new employee work environment built on the Office 365 platform with Microsoft Teams. SmartPoint Intranet corporate portal was also integrated into the company's work.

Results:

“Over the past period, our operational efficiency increased by 6.5%, and more than 90% of employees already use the platform daily. The number of business trips decreased by an average of 15%.

We systematized and organized documents in a file storage, created space in Yammer, and also implemented a corporate portal as a point of unified access to information”.
