

Cloud Strategy and Vision

Cloud Strategy and Vision for your cloud journey

A cloud strategy captures the motivations and desired business outcomes that are driving your move to the cloud. It also identifies a suitable first project with which to implement that strategy.

Defining a cloud strategy and vision is a key element to a successful cloud adoption. It helps ensure that all business and technical stakeholders are aligned. Once created this strategy and vision should be referenced and applied throughout all stages of your cloud journey.

During this engagement we work with your stakeholders using Microsoft's Cloud Adoption Framework to identify:

- **Cloud Motivations** - we help you identify and classify the motivational factors that are driving you towards cloud adoption
- **Business outcomes** - we help you identify and focus on the outcomes that make a cloud migration successful
- **Business justifications** - we help you understand how to justify cloud adoption to business stakeholders
- **First cloud project** - we help you identify a suitable first cloud project

Deliverables

We document the findings from the workshop along with recommendations and suggestions to further develop your cloud strategy and vision.

Our findings are written in such a way that it can be shared and referenced between business and technical stakeholders.

Benefits of KCOM's cloud consultancy services:

- We understand the business and technical factors that make cloud adoption successful
- We bring our experience from the complete cloud life-cycle – we plan, build/migrate and run cloud solutions
- We apply our 5 Pillars of Azure Best Practice to everything that we do
