POWER AUTOMATE FLOW MANAGEMENT CONSOLE

Silver
Microsoft Partner

Alitek Watch provides notifications, monitoring, tracking and analysis of flows which enhance the Power Automate capabilities and improve ROI. With **Alitek Watch**, flows can be logically categorized into process groups where responders can be assigned to resolve flow errors. All resolutions to Flow run errors are collected and stored in a searchable library to assist responders with similar errors in the future. Enhanced dashboards allow for a drill down analysis based on a selected range and specific criteria.

Additionally, **Alitek Watch** subscribers have access to EIM industry experts that will help work through issues, configurations, and development tasks when needed.

Key Features:

» Unlimited Flow Run History Retention

» Flow Error Monitoring and Notifications

» Ability to logically combine flows into process groups

» Assign error responders to specific flows or process groups

» Industry Expert Advisory Sessions

» Automatically re-enable suspended flows

» Detailed Dashboards for Flows, Process Groups and Power Automate Environments

» Ability to capture and review resolutions for all Flow run errors

» Direct navigation into specific flow runs through console

» Export Flow run data to CSV, EXCEL, or PDF
» App ID & App Secret Expiration Notifications

Features:

Features:	Power Platform	Basic	Advanced	Full	Enterprise
Flow Run Data Retention	28 Days	Unlimited	Unlimited	Unlimited	Unlimited
Flow Run Data Export	x	x	x	x	x
Flow Run Analytics	x	x	x	x	x

Flow Errors and Responders

Primary (bar) chart displays the total count of each error type for a specific flow within a selected range.

Secondary (donut) chart displays responders who have logged an error resolution for the flow or selected error type for the specified range.

Flow Error Breakdown
