EC Managed IT and On Side Restoration

On Side Restoration is the leading disaster restoration company in Canada with 40 branch offices and over 1500 employees. They are also the leader in their industry when it comes to technology. Partnering with EC Managed IT in handling their cloud environment has allowed On Side to focus on innovation and growth.

A completely managed cloud infrastructure by EC provides growing companies the advantage of rapid scaling with resiliency and high availability.

Managed Cloud Services

EC first initiated On Side's move to the Azure cloud in 2017. Over the course of a 12-month period, all on-premise systems were migrated to Azure. EC handled all aspects of the work including discovery, planning and deployment, with consultation throughout the entire period.

EC now manages that environment 24x7 with full patch management services, intrusion detection, enhanced security services and performance management while keeping applications at an optimal productivity. Scaling the environment to accommodate growth with ease and low costs.

Challenge

Migration of an entirely on-premise, highly complex and sophisticated technology platform, to the Microsoft Azure cloud with zero business interruption for the leading 24x7 disaster restoration firm in Canada.

Solution

Ensure application compatibility with Azure. Deploy new services in Azure and migrate applications strategically. Employed Azure Site Recovery & class-leading security management services.

Results

Security, scalability & speed. The cloud environment allows On Side to grow at massive scale while maintaining a low operational cost and the highest level of security.

“EC demonstrated the project to us clearly and detailed how they were going to deliver, with confidence”

.Darren, CIO, Onside Restoration
