

SQL Azure Migration Proof of Concept

SQL Server 2008 and 2008 R2 reach the end of their support life on July 9, 2019. What's your plan? Are you tired of being on the upgrade treadmill? Let DSI and Microsoft help you get off your older technology and onto a secure, modern data platform.

WHAT DOES END OF SUPPORT MEAN FOR YOU?

No security updates

There will be no access to critical security updates, opening the potential for business interruptions

Higher maintenance costs

Maintaining legacy servers, firewalls, intrusion systems, etc. gets expensive quickly

Compliance Concerns

As support ends, your organization will likely fail to meet regulatory standards compliance

Your Last Upgrade

With Azure SQL Managed Instance, you can take this opportunity to move your SQL Server 2008 and newer databases to Microsoft's, secure, business ready cloud and make this your last application upgrade.

In this 3 day engagement, DSI will:

- Analyze a target database and identify any blockers in moving to the managed instance.
- Configure and secure an Azure SQL Database Managed Instance in an Azure tenant that you control.
- Upgrade your database and migrate your database to Azure Managed Instance.
- Provide a half-day of readiness and knowledge transfer to get your team quickly up to speed on this new technology.
