# CMCX + Azure ER

CHT 2020

# CMCX – CHT Multi-Cloud eXchange (1/2)

## ■ Product

- ◆ Connect to public cloud platforms (hicloud, AWS DX, Azure ER, Google GCI).
- ◆ Provide secure private connection service.
- ◆ Better connection reliability and stable low-latency connection.
- ◆ Flexible connection bandwidth speed (up to 10Gbps).

## ■ Three characteristics

- ◆ **Connection quality:** Enterprise-level dedicated lines are directly connected to the public cloud, and enterprise-critical application services can enjoy higher connection quality.
- ◆ **Secure connection:** use a dedicated data line to ensure the security of transmitting sensitive data.
- ◆ **Flexible bandwidth:** lease bandwidth and pricing based on demand, flexible expansion and upgrade of bandwidth from 50Mb to 10Gb.

## ■ Three upgrades

- ◆ **Bandwidth upgrade:** Provides the largest fixed bandwidth, allowing enterprises to stably transmit important data.
- ◆ **Delayed upgrade:** Use dedicated lines to directly connect to the public cloud, greatly reducing the data transmission response time.
- ◆ **Backup upgrade:** Provide more than 7 types of backup architecture plans to ensure uninterrupted transmission of important and confidential data.

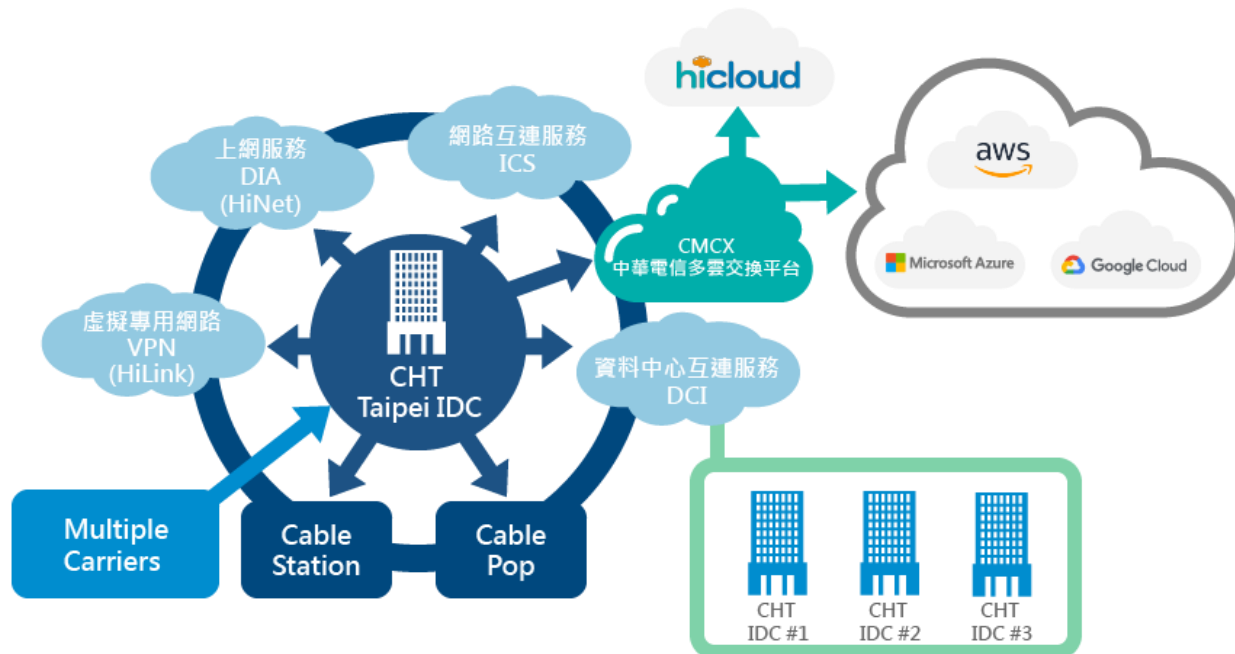

# CMCX – CHT Multi-Cloud eXchange (2/2)

## ■ Program

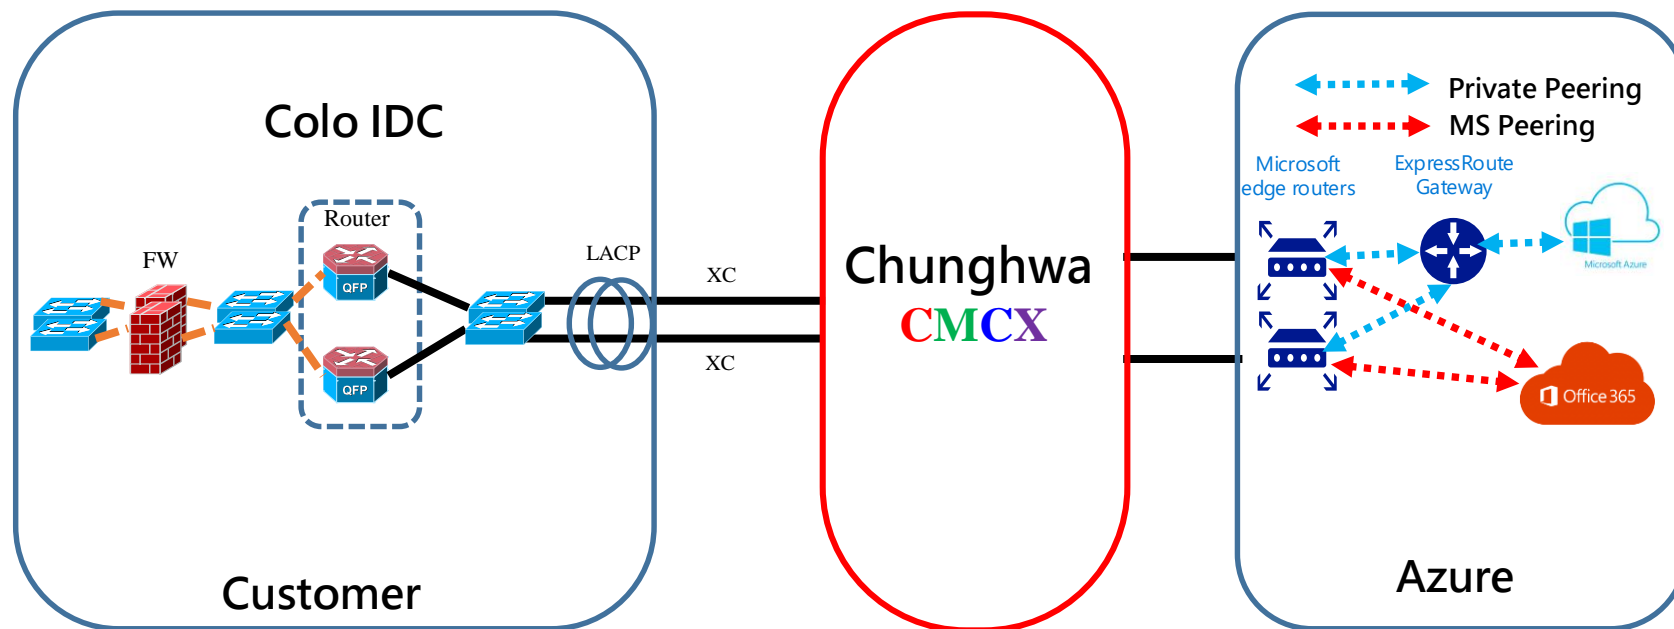

- ◆ Adopt dedicated personnel to assist customers in project planning and consultation.
- ◆ Provide corresponding solutions according to user needs.

## ■ Price

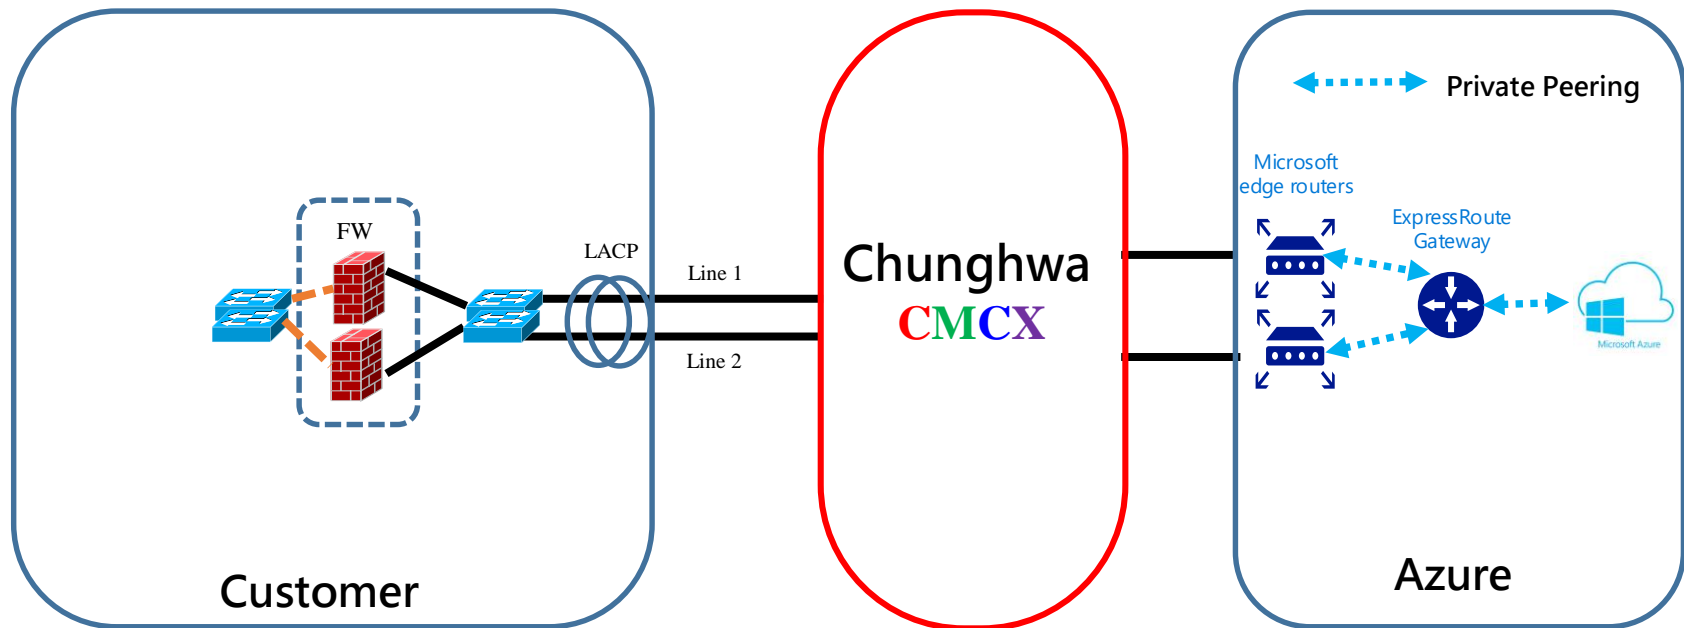

- ◆ Negotiate the project, provide a complete obstacle handling process, and give customers complete technical support and after-sales service.

# Case 1: Colo IDC Customer

# Case 2: Dedicated lines Customer

# Review and Summary

- Use managed CMCX+ER to keep you in controllable networks.
- Chunghwa Telecom's multi-cloud exchange platform (CMCX) simultaneously meets the direct connection needs of multiple public clouds, centrally manages, and can flexibly adjust the bandwidth of each public cloud by submitting an order.
- CMCX + Azure ER provides enterprise customers with flexibility in renting bandwidth (50Mbps ~ 10Gbps), which can be planned and introduced step by step. For example, first adopt a direct connection solution for important information services that require strict data protection and stable circuit quality, while ordinary information services maintain their current status.
- CMCX equipment is built in Banqiao IDC. Banqiao IDC has passed TIA-942-A data center certification. Rated 4 has a reliability of 99.995% and provides Taiwan No1 of public cloud direct connection services.
