

Magento Accelerator by ORBA

Start selling online in 5 days with our Magento Accelerator!

WHY:

The world is transforming, your clients are waiting for you online. Let us help you stay ahead. Within as little as one week we can get your store online so your business can thrive.

Typically Magento was considered a good platform for larger enterprises. Best in it's class, but requires a lot of configuration, upfront work and development, just to get going. This is because it has a ton of features & each company uses only a small portion of them – so every implementation is different.

This has placed Magento in the costly & cumbersome category and we want to **break this myth**.

ORBA has identified multiple configuration elements which are common for most stores and we have created automated scripts, which help us set up a fully working store within a matter of hours. This used to take days & cost thousands. Not anymore.

With ORBA's Accelerator, **based on Microsoft Azure & Kubernetes**, you can start selling online in a matter of days and pay only for the relevant work. Why pay for something that can be automated?

WHAT:

At the end of the process, you will have a store that is ready to sell your products online.

The scope of the project includes:

1. eCommerce platform configuration
2. product & categories setup
3. store e-mails configuration
4. payment collection system
5. CCPA & GDPR modules
6. Google Analytics for data tracking
7. basic legal documents (T&M and Privacy Policy)
8. online training session

Details can be found in the screen section.

We know that this is just the beginning of the journey. We will be there for you at each step of the way, to help out with development, optimization & maintenance of your store.

HOW:

We created a proprietary solution. It will not only set up your store, install selected modules & the theme, but also configure the basic settings – **all done automagically by ORBA's solution**. This used to take weeks of paid work.

After running these scripts we will work on importing the products & categories to the website. As a cherry on top, we will add Terms & Conditions and Privacy Policy. We can use yours or deliver our own generic template.

Our approach is based on our tried and true model: we start with a best in class platform, we then install ready-to-go components with core e-commerce features, and then apply your brand equity to achieve a customized design made just for you.

Our core base allows us to **launch your online sales as fast as possible, without any compromise in quality and security standards.**
