Simplify your EHS management operations in Dynamics 365

EHS Management for Dynamics 365 is a complete Environment, Health and Safety management solution. It is available in the shape and form that suits your organizational structure and culture. Enabling you to access your incident data, compliance reports, tracking information and much more.

CHALLENGES

Health and safety have become serious concerns in organizations as the culture shifts more in the direction of human-to-machine interactions. The international health and safety standards of the employees are also becoming tighter with time. It only makes it more crucial than ever for organizations to look for the most robust health and safety management software solutions for their employees.

OUR SOLUTION

EHS Management provides an intuitive process for managing your end to end EHS operations. Incidents can be captured from logging through to closure. Activities triggered automatically. Risks identified and mitigated. Audits completed and actions and details captured to ensure compliance.

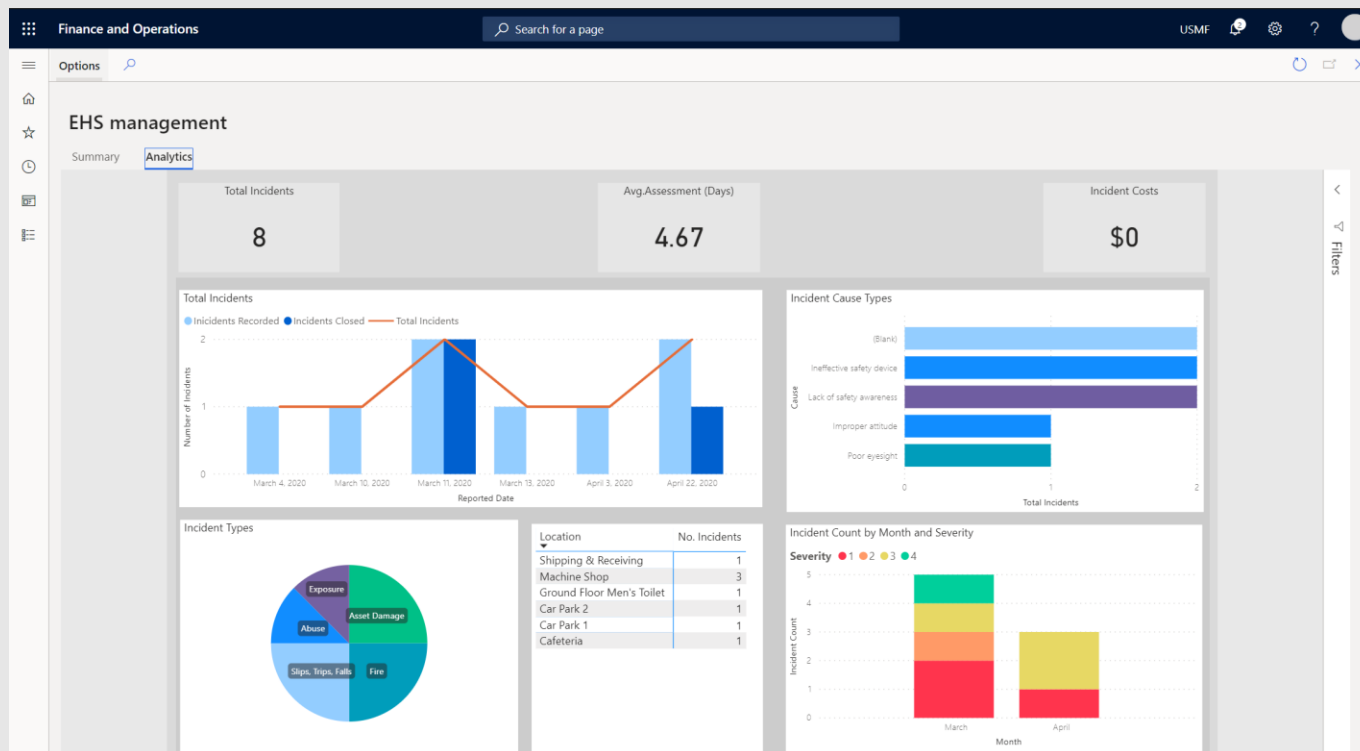

BENEFITS

EHS Management enables you to identify, track, analyse, manage and mitigate Environment, Health and Safety Risks. Fully integrated and built within Dynamics 365 for Operations, enabling you to make the most out of your investment in Dynamics 365 for Operations.

EHS Management

Track and control your incidents

Incident management features enable complete tracking and control from initial logging through to analysis, closure and claims management. Incidents data can be structured to suit your organization and process. Any incident type can be captured such as incidents related to employees, contractors or visitors, environmental incidents, asset damage or security incidents. With the ability to automatically trigger predefined processes and activities based on the type of incident.

INCIDENT MANAGEMENT

Record all aspects of the incident management process, including witness statements, injuries, environmental impacts, asset damage. Capture all related documents directly against the incident. Assess incidents and record analysis completed and corrective actions or improvements required to mitigate future incidents occurring.

CLAIMS MANAGEMENT

Track and report on all costs related to an incident such as medical expenses, internal investigation costs, asset repair costs, environmental cleanup. EHS Management is fully integrated with standard Dynamics 365 Project Management, all costs link to a claims project, a detailed breakdown of costs can be reported and easily sent to your insurance company.

WORKSPACES AND REPORTING

The EHS Management workspaces gives you an 365 view of your environment, health & safety operations. With insights and analysis of the status of incidents, injuries, risks and audits.

All the data within EHS Management can be used within Power BI, enabling you to quickly and easily create reports and dashboards specific to your operation.

EHS Management

Audits & Risk Management

Ensure you stay compliant, record and track the progress and outcome of internal and external Audits. Ensure observations are investigated and your operation's health and safety processes continually improve.

Record Risks and the corrective actions required to mitigate and introduce changes to ensure your operation is operating safely and within safety guidelines.

AUDITS & CHECKLISTS

Make internal and external audits a breeze. Ensure in-depth and complete audits with the help of audits and checklists functionality. It is a perfect tool that allows users to track and complete tasks that have been completed. With this feature, you can rest assured that your audit will complete error-free.

RISK MANAGEMENT

Manage risks like never before. You can create task and risk-specific controls. Assign the control of the risk to the responsible party and automate reminders so they can close the issue within the given deadline.

CORRECTIVE ACTION MANAGEMENT

Giving out corrective actions is not enough. You have to track all the corrective actions that you have issued, those that have expired, and any with special comments. Moreover, send alerts to the employees to inform them of corrective actions and their expiration.

EHS Management

Compliance and Training

Safety and compliance is vital, Meeting Management and Training Management enables you to not only ensure your workforce's training is up to date and certificates are renewed in a timely manner, but also enables you to keep track of all Health & Safety meetings, topics discussed and associated actions.

TRAINING MANAGEMENT

Giving you the tools to ensure you record and track that your workers are amply trained. Record employee competencies using integration of skills and certificates with Dynamics 365 Human Resources. Easily view certificate expiry and track renewals

MEETINGS

With EHS Management you can record all health & safety meetings, topics, attendees and any follow-up actions. Ensuring you keep a track of all discussions related to safety and compliance and outcomes.

DOCUMENT MANAGEMENT

EHS Management is a single solution for all your EHS data. Throughout the module related documents and notes can be stored directly against records. From Incident Management document such as witness statements or medical expense claims. Or documents relating to Audits such as infringement notices, to documents related to Health & Safety Meetings.

Simplify processes, increase efficiency and streamline your business.
