InfoStrat's Microsoft Dynamics 365 Implementation Cost Calculator

Calculating costs for a Dynamics 365 implementation can be confusing. Our aim with this calculator is to show the products and services you may need to purchase.

Dynamics 365 may be purchased as individual apps such as Sales, Marketing, and Finance, or in a bundle which includes rights to use multiple apps. **Quantity discounts** are available and some customers such as government agencies, education, and non-profits may be eligible for special pricing.

Promotional pricing is offered from time to time for current subscribers to Dynamics and Office 365 and to customers who belong to certain groups such as government, education, and non-profits.

Microsoft Dynamics 365 may be **deployed in three different ways**: in the Microsoft cloud (government or commercial), on premises at a customer's facility or hosted by a third party. Note: If you select cloud or hosted deployments, there is no hardware procurement cost, and the software licenses are included in the subscription price.

Implementation Services include:

- Planning
- Customizations
- Integration
- Data Conversion
- Training
