

**RETURN TO WORK**

**HEALTHY YOU**

# Healthper's **Return To Work** is a comprehensive program to keep employees **Healthy** and **Safe** as they re-enter the workplace.

## ON SITE TESTING

To help employers meet their legal obligations, while also limiting the potential impact on their employee population, Healthy You includes onsite temperature checks and antibody testing for employees prior to returning to the workplace.

## GOALS

- ✓ Help Employers Plan for a Healthy Return to Work
- ✓ Offer a Secure Testing Environment for Employers and Employees
- ✓ Provide Compliance Reporting to Mitigate Employer Risk
- ✓ Deliver Emotional and Physical Health Resources

## TEMPERATURE SCREENINGS

An in-person temperature screening can take place at the beginning of every day, the beginning of each shift, and/or throughout the day, as employees and visitors enter the building. If anyone tests above 100.4° F, our staff will triage appropriately, including delivery of an employer-customized entry denial letter with instructions. Screenings may take place at each point of entry. Includes: Personal Protective Equipment (PPE); Infrared Thermometers; a COVID-19 Questionnaire; a Customizable 'Denied Entry' Letter; and a Denied Entry Report

## ANTIBODY TESTS

Employers may also arrange for tests to check the blood for antibodies, which will help identify employees and visitors that previously infected with COVID-19.

Serologic antibody tests are provided onsite, as well as at LabCorp locations nationwide. Healthper is also continuing to monitor the status of POC and IgG antibody testing – and may make those available, pending approval.
