Modern Web Applications

Are you stuck with old applications that are important for your business but over the years have become complex and costly to manage?
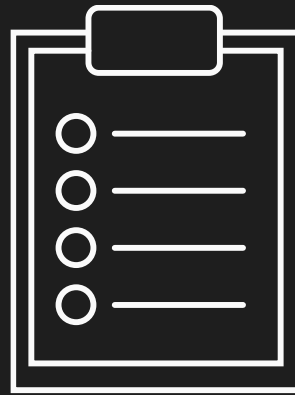

Would you like to focus on delivering business value faster instead of having to handle growing hardware needs and complex IT-infrastructure?

Our App Modernization Workshop will help you transfer your application to a modern, efficient platform that will allow for a more agile adjusting to future business needs.
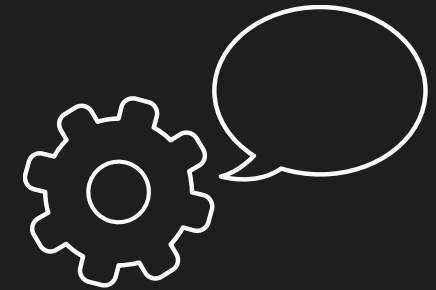

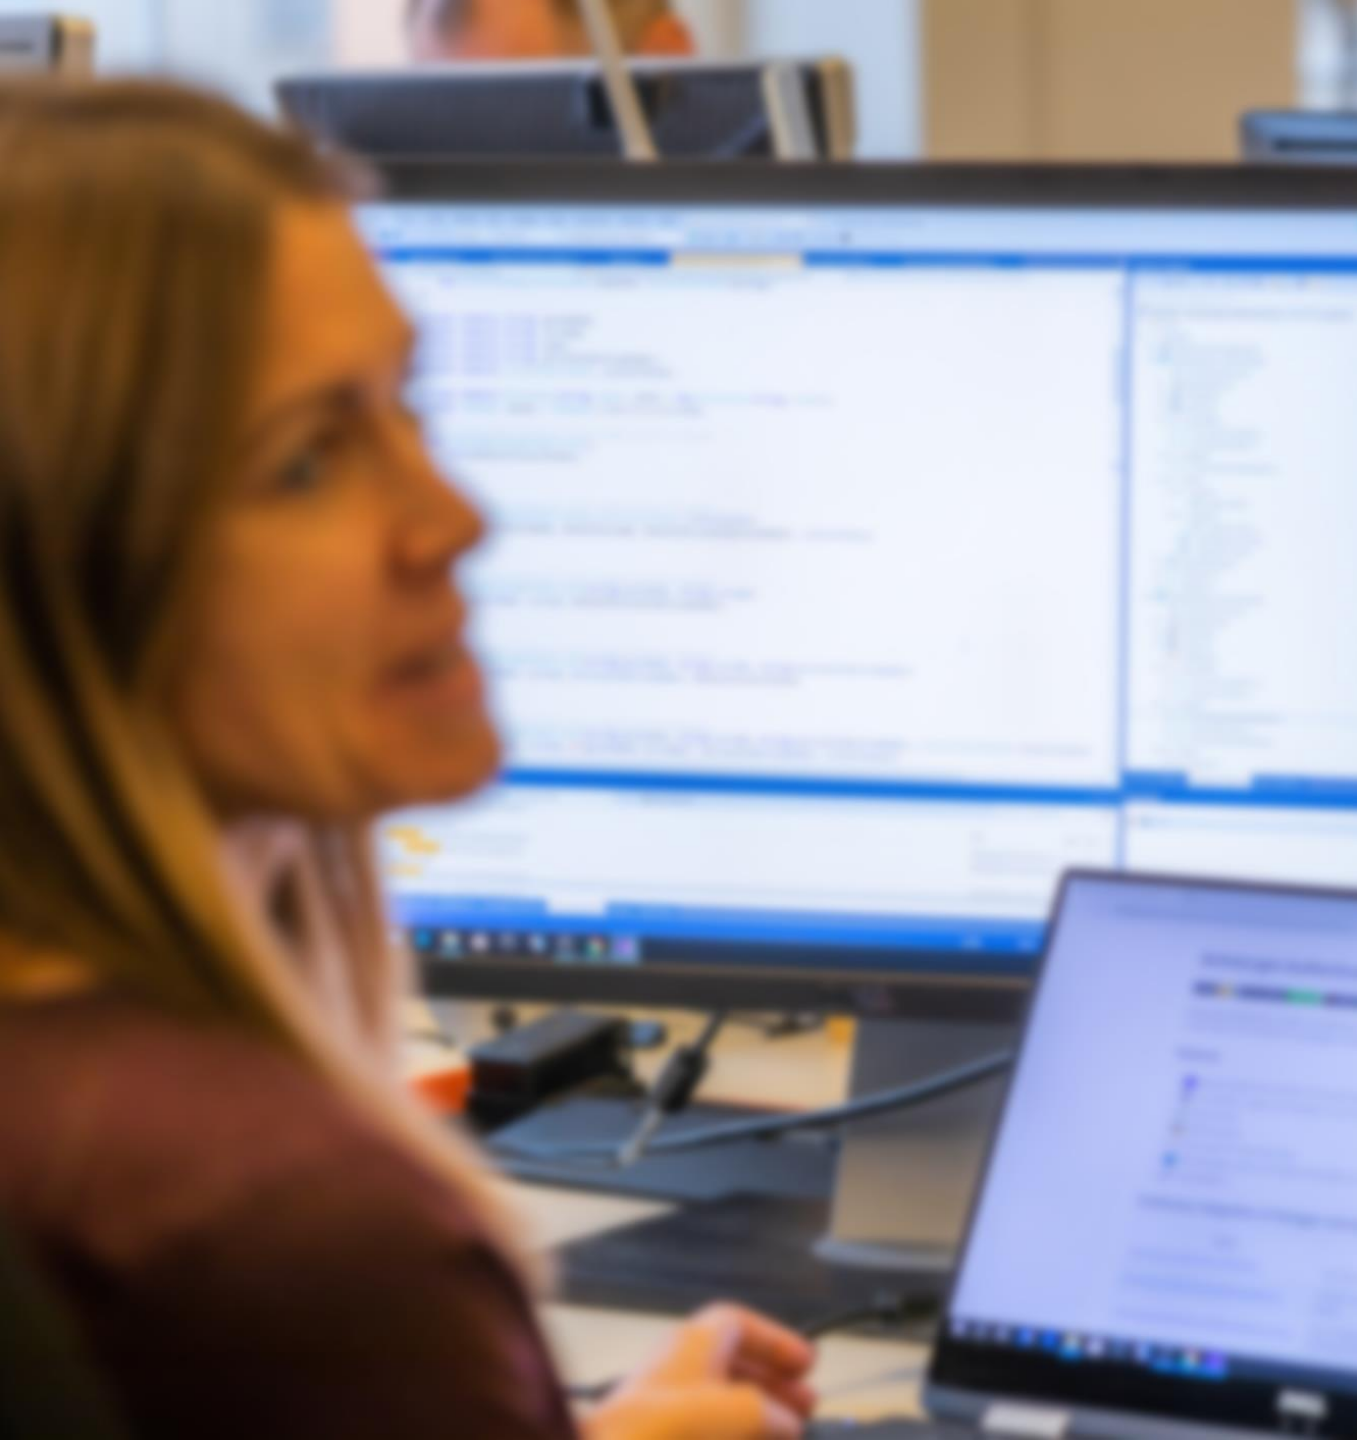

Modernization journey

1. Assessment

2. Migration plan

3. Innovation

1. Assessment

When the target application is an internet-facing application, we start with an automated analysis of the application. This combined with an online meeting where we discuss the current architecture and challenges, we make sure that we will have a solid ground for the next workshop phases. The assessment phase is free of charge and you have no obligation to continue with the next phases.

2. Migration Plan

During this phase, we work tightly together to determine, what parts should be replaced by other services and what parts that need to be rewritten. We examine the application thoroughly from many different aspects such as scalability, security, cost-efficiency, and more.

Innovation

In the last phase we focus on how to take the application to the next level in terms of agility and innovation.

How do we achieve more effective deployments and monitoring, can we benefit from proactive analytics from Azure Monitor, and setup deployment pipelines? How can we quickly incorporate new functionality by using serverless technologies?

By using Logic Apps, we can integrate with external services faster and simpler. We also examine where we can take advantage of Cognitive Services, incorporating more innovative solutions to business needs.

The outcome of the workshop is documented in a plan for how to move the application modernization project forward.

The price for this workshop is 49 000 SEK (excl. vat)
