GET THE BEST OUT OF THE CLOUD, ADOPTION, AND YOUR PEOPLE

INTRODUCING IA-CLOUD

IA-Cloud is our advanced management, monitoring and optimisation platform for customers and managed service providers that are using Microsoft Azure for their workloads. Leveraging years of experience in the industry, our platform ensures you get the most out of your Azure investment using the power of automation.

CLOUD MIGRATION

ARE YOU NEW TO AZURE?

IA-Cloud can be used with existing Azure workloads, but if you're new to Azure and you're wondering where to start, IA-Cloud acts as your personal Azure Consultant, building a best practice environment ready for migrations, new builds or even readiness for hybrid disaster recovery scenarios. And the best news is, it **cuts build time by as much as 90%!**

DID YOU KNOW THAT 23% OF BUSINESSES HAVE NEVER TESTED THEIR DR SERVICE?

With IA-Cloud DR deployments, we give you a dedicated and isolated area to test your DR drill without impacting live services so you can be confident your DR environment will be there when you need it.

GET UP AND RUNNING IN NO TIME

IA-Cloud has been designed with simplicity in mind and getting started is no exception. Through our wizard-driven approach, we'll get you up and running with management, monitoring and optimisation in a matter of hours! That's up to **80% faster** than is traditionally possible.

CLOUD AUTOMATION

CLOUD NATIVE MONITORING – EVEN FOR PLATFORM SERVICES

Most cloud monitoring tools only work for IaaS resources, as they've been adapted from on-premises versions. According to Gartner, **serverless usage increased by 25%** in 2020 meaning this could be a real headache.

IA-Cloud monitoring has been developed for the cloud and takes advantage of native capabilities to monitor not just your VMs, but also serverless resources such as recovery vaults, storage accounts, networking resources and even granular monitoring around your serverless web apps and database technologies.

FULL NATIVE ITSM INTEGRATION

Centralised alerting is essential to providing a consistent, quality service, and this is where some tooling falls down.

IA-Cloud includes a full integration service for modern ITSM platforms out of the box.

AUTOMATING YOUR BAU

Investment in your technical teams- from recruitment and training, to salaries and desk space, can be significant. Getting the most value from them is essential and reclaiming just a few hours a week to refocus on customer experience and innovation can have a dramatic impact on your competitive advantage.

From automated onboarding of resources for backup, patching and monitoring, to full, evergreen documentation of your entire Azure environment, IA-Cloud has you covered, leaving your technical teams to focus on what matters to your business.
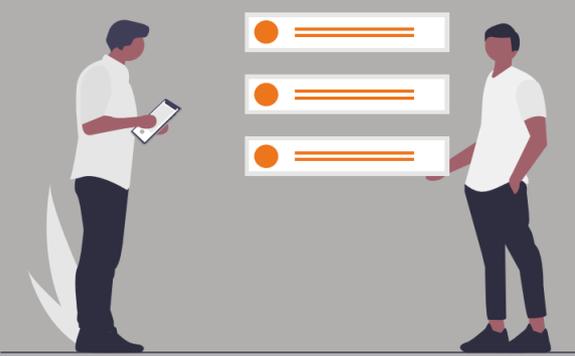

CLOUD COST OPTIMISATION

Public **cloud consumption is expected to grow by 47%** over the next year, yet organisations are overspending by as much as 80% according to Gartner's 2020 report.

IA-Cloud provides an easy-to-understand cost and performance engine at the tips of your fingers, not only for traditional IaaS virtual machines, but also your serverless platform resources.

With simplicity at its core, IA-Cloud's recommendations are easy to understand and action. This not only saves you time, but IA-Cloud customers have seen average cost savings of 30%.

ARE YOU A MANAGED SERVICE PROVIDER?

MSPs now more than ever are having to support a rapid growth in cloud environment for their customers.

The worldwide pandemic has increased demand for cloud usage with 59% of enterprises expecting cloud usage to exceed prior plans.

IA-Cloud is designed for IT teams and for MSPs. With a dedicated MSP portal, MSPs can manage the installation of IA-Cloud and view all recommendations, monitoring and optimisations for all their customers from a single pane of glass.

WHY ULTIMA LABS?

Ultima Labs was founded at the start of 2020 with one mission in mind – to help organisations to adopt automation more easily.

Drawing upon a wealth of experience from professional and managed service consultants, our solutions combine simplicity with deep expertise to ensure IT teams and Managed Service Providers get the most from IT investments, and to enable your teams to focus on what really drives value in your business.
