

Migration Projects

Tools and Processes

Set of proprietary in-house developed tools and strategic processes to facilitate Qlik to Power BI migration activities.

BI Connector

Operationalize already modelled Qlik data with full or delta loads to your target DB of choice

The BI Connector is a unique, simple, and effective solution for any external applications or processes to use Qlik datasets as data sources.

This connector simplifies either the connection or the migration process to integrate Qlik dataset into flat files, database tables, or Power BI in parallel to your current processes and without any downtime.

Seamlessly load QVD data into target databases such as:

The BI Connector is the only tool on the market that allows you to use your Qlik data in other BI tools or applications with all associations and transformations intact.
