User-Manual
FilesConnector
Version 3

INDEX

1. Description

This tool is used to join files. The configuration of this tool is done with an INI-File „TSS.INI". This INI-File has a few different parameters.

The INI-File hast he following parameters:

- *„Objektbasiertes_Anzeigen"* This parameter determines if the tool is running in the background or is used with the UI.
- *„Eingabeverzeichnis"* This path specifies where the file, that should be joined, are located.
- *„Archivverzeichnis"* This path specifies where the original files should be archived.
- *„Kundengruppe"* This line contains the customer-group, ILN, the destination-path for he joined files and the file-format.

If the parameter *„Objektbasiertes_Anzeigen" is* FALSE then the program will be running in the Background. If it is TRUE then it will open to the UI.

!!!Attention!!!
The INI-File must be located in the same Directory as the .EXE!

2. *User-Interface*

Image 1 UI

In the first drop-down menu you can choose the customer-group. The files will be loaded and displayed from the path specified in „*Eingabeverzeichnis" (INI-File).*

The checkbox „All" is used to select all the files displayed in the List. A more detailed selection is possible if you check the boxes in the besides the files that you want to process.

Upon pressing the „Process"-button the files will automatically get joined and moved to the specified destination-path.

If the destination-path (specified in „*Kundengruppe"*) is NULL then the files will get generated in the path „*Eingabeverzeichnis".*
