

# Identity and Access Management for the Legal Industry

## Identity is critical to your security

In today's world, the threat landscape is evolving quickly for all businesses, large or small. Attacks are becoming more frequent and the stakes have never been higher.

- In 2019, passwords were found to be an enabling factor in over **80% of breaches**.
- **Users reuse ~5 passwords** for all of their accounts

To counter this threat, organizations need to reduce the number of usernames and passwords that end users are required to remember. Too many passwords tends to lead to insecure passwords and poor password management practices.

Part of that effort must include a secure user identity repository.

## How can Axis Business Solutions help your organization?

Axis Business Solutions is a recognized Microsoft Gold partner, and we are recognized experts in Azure Active Directory and identity security. We are skilled in the practice of identity experience, and we can help YOUR organization with your identity needs.

Azure Active  
Directory

## Why Azure AD?

- Reduce dependence on 3<sup>rd</sup> party solutions
- Integrated capabilities both on-premises and in cloud
- **Support a Zero Trust network**
- Frictionless user experience across clouds

## Identity and Access Management Working Session

One of the solutions our customers have found most valuable and impactful to their business is the **Identity and Access Management Working Session**.

During this session, we will sit down with you to understand your identity, security and access requirements. This typically involves a discussion around these topics:

- **Single Sign On:** Being able to log in to applications using a single identity is a huge step forward in the effort to improve end-user experience.
- **Multifactor authentication:** MFA has been shown to prevent the most common identity breaches by up to 99%. We'll show you how easy it is to get set up.
- **Conditional Access:** Control WHICH applications a user can access, from WHERE, and on WHAT device – using Conditional Access.

Based on these discussions, our experts will provide you with recommendations and a “path forward” to help ensure that you can begin securing your environment and identities immediately, providing your end users with the simplicity of single sign on and controlling access to the most important data in your organization with Conditional Access.

Axis is devoted to helping organizations leverage technology to reduce operational costs, increase profitability and mitigate security and financial risks,

Let us show you how we can help your organization TODAY!
