Main features

Most important features

Bring structure to and transform your information
- Extended Document Lifecycle management: dynamically adding context and relations to documents
- Data extraction (OCR or eDocuments)

Single source of truth
- Integrate in all your business applications
- Get information from anywhere
- Uniform UI for searching & accessing the information fast
- Users don't need to think about where the information resides
- Access from anywhere (including mobile)

Works seamlessly with **Microsoft Power Platform & SharePoint Online**

Security by Context

Plug & Play integrations:
- Dynamics 365 Finance & Supply Chain
- Dynamics 365 Business Central
- Dynamics 365 Sales
- Microsoft Teams

Why a Document Warehouse instead of...

... standard DMS features in your existing business systems?
- Every system has its own specific functionality and interface
- Documents are only available in the specific business system
- Documents often don't follow the process flows (processes are not limited to one system)

... SharePoint?
- Customizations and project work required to achieve similar functionality
- Flexible context:
  - Documents in a fixed location
  - Governing access to documents limited
- Not everything belongs in SharePoint (for example engineering)
- SharePoint works better together WITH Raptor: Versioning and Collaboration

... standalone DMS systems?
- Lacks the integrations in the business systems you work with from day to day and thus not integrated your business processes
