## Business Scenario

Do you want to develop intelligent applications that will make face and emotion recognition out of a picture, and bring the innovation in your company?

Connect with Cognilytic Technologies for a 2-week PoC helping you understand how you can leverage Azure Cognitive Services to make applications that can imitate human's senses of seeing, speaking, identifying, and digitalizing unstructured & semi-structured data.

## Deliverables

1. Detailed plan and architecture diagram of production setup, including estimates for:
  - a. Ingestion pipelines and data processing
  - b. Reusable Azure services-based source code for predictions
  - c. ML operation using Azure ML Service or serverless architecture: Azure functions, Azure Databricks, Cognitive Services etc. (based on the use case)
2. POC code checked in on Github & implemented on Azure for the identified use case
