

Connector Software

Developed by senenergy services ag
Version: V2.0

Effective data management contributes significantly to the success of a company.

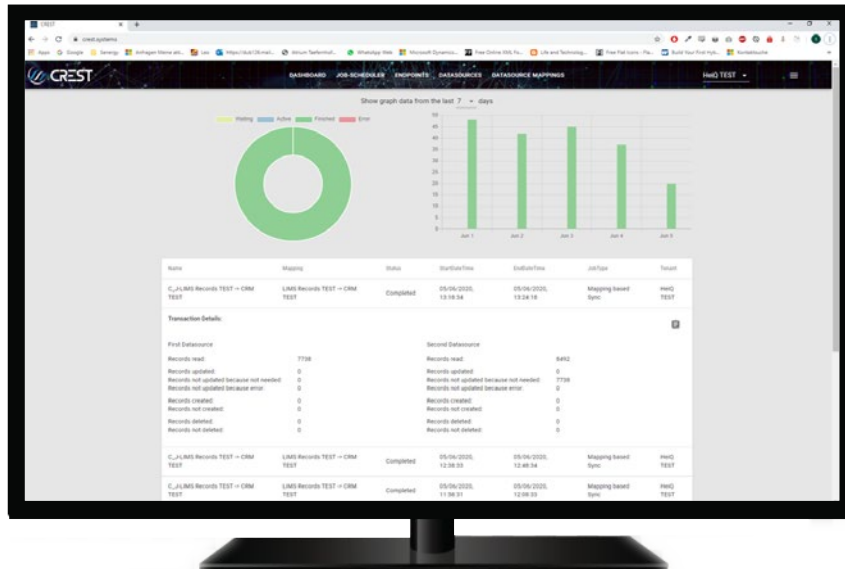

Smooth data exchange, lean processes, meaningful analyses - all this is only possible with „clean“ and company-wide available data.

CREST SyncData - a fully automated independent software tool synchronizes your data on demand in real time or time-controlled across various systems. It does not matter whether the source and target systems are operated - locally or in the cloud.

Hybrid environments are also supported with CREST SyncData.

The simple and clearly arranged user interface enables the customer administrator to get started quickly and set various options for synchronization.

CREST SyncData is available as a cloud service, but can be customized upon customer request.

Key facts

- ➡ Modern Connector Software - no Interface Development
- ➡ Cloud-Service (SaaS) or On-Premise-Installation
- ➡ Connections in all environment variants (cloud only, hybrid, on-premise only) possible (via CREST gateway)
- ➡ Create mappings, scheduled jobs (by interval or time)
- ➡ DirectWriter: Module for event-controlled adjustment

Pricing

CREST *Basis Production + Test -> incl. 20'000 *Transactions/Mo.	€ 175.00/Month
