Envision what your future Data platform should be able to do

Our experts are here to help you solve key challenges such as:

- Build Agile Data Processes

- Generate value with Proactive Insights for Customers, Employees, Logistics, and Financials

- Establish a Modern Cloud data platform

- Develop new Services like data monetization

- Analyze, Plan, Deliver and Control actionable insights

Microsoft Partner
2020 Partner of the Year Winner
Modernize Finance and Operations Award

My legacy data platform needs a reset – but where to start?

There are usually many drivers and aspects behind the need for a modern data platform:

Strategy – Your digital agenda includes the launch of new offerings, but you are lacking combined and centralized structured and unstructured data to analyze, develop and test certain functionality.

Transformation – The modern cloud data platform should eliminate data silos. You see the need to become more data-driven, to establish a connected workforce with automation where possible.

Cloud – You need to understand the impact of a modern Cloud Data Architecture and how this will have a positive business impact and the related integration scenarios.

Delivery – Are you discussing what "agile" means to you, which future skill sets you need, and what your future Data Analytics partner should bring to the table?

How HSO can help

We can be your guide in this upcoming journey. Together with you, we envision a modernized Cloud Data platform that helps your business compete and win new customers.

Our approach brings all relevant aspects into one structure. We combine your digital data plan with the data reality.

HSO has decades of experience in managing large, international implementations. Our teams combine the industry know-how, latest Microsoft technology, and Modern Delivery capabilities.

Hso

Envisioning Data Platform Modernization

How to get started on your (Cloud) data platform journey

Inspire
Imagine a future state data platform solution for your business

Envisioning Workshop
(1 day)

Use design thinking - a proven problem-solving process - to organize great ideas through creative and critical thinking exercises. With this workshop, we will address:

- Key Drivers and their impact to your Data Platform roadmap
- Major process enhancements
- Change Management considerations

Design
Discover what's possible by aligning technology to business goals

Solution Assessment
(3 days)

Analyze what's feasible – whether it is about an expansion of your current business application landscape or a greenfield approach, it´s about how technology will affect your objectives. Our technical analysis will cover:

- High-Level Data Analytics Architecture
- Azure Cloud artifacts

Empower
Empower others in your organization to see the value

Visual solution demonstration
(1 day)

Share demo or video assets across your organization to increase alignment and enthusiasm for the value of your modern data platform.

Your will get a feeling about working with Azure Data artifacts and how it integrates with your ambition.

The *Envisioning Workshop* aligns the team around the overall project drivers and business goals.

The *Solution Assessment* takes a high-level view on Data platform design, including Azure Data Lake, Azure Synapse, Power BI, Power Apps, and how they best integrate with your existing environment. As a result, we will provide you with a clear, actionable picture of how we can help you reach your data platform ambitions.

The *Solution Demonstration* shows a relevant business use case to your project stakeholders.

Starting off, we go through an Analysis phase, where we cover and discuss the entire set of project dimensions.

This gives us the basis to determine timeline, resources and budget. Contact us today!
