

## One tool to check all your customers.

Companyweb specialises in company information in Belgium. Our services allow you to understand the risks, the survival rates, the payment capacity, the profitability, the stability and other key factors of every Belgian company.

You will know who you're doing business with – and who you shouldn't be doing business with! – at the click of a button. We offer unique annual subscriptions that grant you near-unrestricted access to our database of core figures and information on all Belgian companies.

## Are your existing and prospective customers financially healthy?

Companyweb brings together all the relevant information in its health barometer, a clear and easy-to-understand indicator with no financial expertise required.

The credit limit is an indicator of a company's credit capacity, allowing you to accurately assess whether or not a company is able to meet its financial obligations in the short term. Our warnings immediately highlight the risks with respect to the company, alerting you to any potential hazards.

## Keep a close eye on specific customers.

Companyweb's unique Alert Service allows you to keep a close eye on specific customers. You can create your own online list of those customers you want to track, and Companyweb will send you automatic notifications if any companies on your customer list experience significant changes.

If a company is threatened by bankruptcy or if other major indicators change, you will immediately be informed of this by email. That means you do not have to continuously check whether any negative indicators arise with respect to a given company.

## Integrate with Software like MS Dynamics 365 Business Central.

Just like Microsoft Dynamics 365 Business Central, ninety percent of accounting packages used in Belgium are already integrated with Companyweb. Your software will automatically link to the Companyweb databank at the push of a button, which means you can get even more out of your accounting software.

And if you use your own ERP, CRM or other software application, Companyweb can be likewise integrated. We provide customised integration so that your company can smartly and efficiently use our data.
