PowerBI ScoreCards

Your KPIs and scorecards wherever you are.

Measure and manage your team in one place

Save time and effort in gathering, managing and reporting performance information from your organization by setting up a scorecard system with KPIs for different teams and individual employees. KPIs can have as many fields and hierarchies as necessary to reflect your organization.

Drastically reduce time spent measuring KPIs

Automate the scorecard process by connecting PowerBI ScoreCards to a SQL database or DAX query and save employees the task of manually reporting KPIs. Also save your organization many hours, since most data can be automatically fetched and added to the scorecard, and employees notified to fill in any necessary manual information input.

Align business units and processes with vision and mission

PowerBI ScoreCards introduces visual communication to strategy and allows managers to monitor the performance of teams and departments with the necessary clarity to make sure everyone is working towards the same goals and under the same overall strategy.
