IT Innovations for People

2-WEEKS ASSESSMENT

YOUR INFRA IS IN CLOUD AND NEEDS OPTIMIZATION?

Try assessment which focuses on analyzing of current cloud consumption and identifying opportunities for optimizing resources and costs. Optimizing your current workloads can save up to 20%.

Assessment includes:

- A thorough analysis of the performance of cloud environment
- Recommendations of size options for the computing and disk subsystems of each virtual machine using the performance evaluation results
- TCO calculation
- Calculation of the estimated performance of the computing and storage subsystems for each virtual machine in the cloud

Cost optimization includes:

- Virtual machine analysis
- Application services analysis
- Database analysis

Results

- Report on current state of your environment
- Cost analysis report
- Checklist of pre-migration and post-migration tasks

We provide you with accurate analytics and powerful automation to **easily, quickly and reliably** optimize your resources.
