

Logicalis Desktop as a Service (DaaS)

Desktop Solution for the Agile & Scalable Enterprise

Logicalis DaaS (Microsoft Windows Virtual Desktop - WVD) delivers your office productivity and business applications securely through a virtual desktop or web browser over the Cloud. This provides you with a highly secured yet flexible digital workspace service that enables you to focus on your business without having to be concerned with the life-cycle demands of owning and maintaining IT Systems.

Deploy and Scale in Minutes with Simplicity

Logicalis Desktop as a Service is powered by Microsoft WVD, delivering a comprehensive desktop and applications virtualisation service over the internet residing in the Cloud. Your organizations can deploy and scale desktops with its required suite of applications in minutes with built-in security and compliance features.

It is the only virtual desktop infrastructure (VDI) that delivers simplified management, multi-session Windows 10 optimized for Microsoft 365 applications.

Windows Virtual Desktop (WVD)

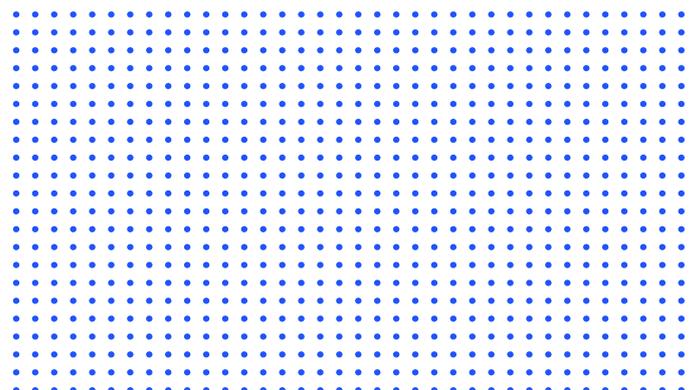

Logicalis DaaS, a managed Cloud Based PaaS delivered on a Operating Expense model.

Features and Benefits

Ease of Service Delivery and Improving End-User Experience

Critical for many organizations required to meet demands of a very dynamic and mobile workforce, DaaS can very quickly configure and deliver virtual desktops with dedicated user digital workspace to the end-user device(s). End-users are able to log into their virtual desktop, gaining access to their dedicated digital workspace anywhere regardless via the internet, while having the flexibility to make change requests and updates to their access profiles at any point of time.

Flexibility on Platform and Device

DaaS also supports an extensive range of devices and delivers a “local” Windows experience on your choice of device, from Windows machines, Apple MACs to mobile devices running on iOS and Android, great for organizations that supports ‘Bring Your Own Device’ (BYOD).

Significant Cost Savings

DaaS can be deployed on end-user devices with considerably less computing power, storage in comparison to traditional deployment, which also deliver significant cost saving in power consumption to your organization.

Enhanced Security and Data Services

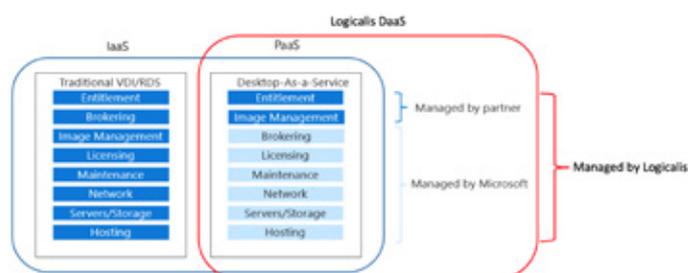

With a virtual desktop infrastructure, data is delivered via the cloud or a data centre, which reduces security risks significantly. In the case of a missing laptop or a stolen mobile device, unauthorised service or data access can be swiftly and easily be activated. Security patches or updates can also be easily executed with DaaS because all connected devices can be updated simultaneously regardless of their location.

With DaaS, the end-users data resides in a centralised and remote location, which can be constantly backed up, allowing it to be better secured and protected, so that end-users no longer need to worry about managing their back-ups.

Technical Support and Customer Success Services

DaaS offers support services covering the areas of problem resolution, customer success and adoption, and designated support management. Basic support is included at no additional cost for the duration of your subscription.

Deployment Model

Windows Virtual Desktop is deployed via a Platform as a Service (PaaS) with Microsoft Azure, delivering the functionality of desktop and application virtualisation service managed by Logicalis, while focus on your core business.

DaaS Adoption Drivers

Logicalis DaaS is well-suited for businesses experiencing or in need of:

- Seasonal Demand on use of Applications & Services
- Management of Contract/Temp Employees
- High Availability
- Disaster Recovery (DR) with Data Protection
- Business Continuity Plan (BCP) – Remote Working
- Need for Secured Access
- Preference for Operational Expense Model
