# CENTERSIGHT scale – our approach

## IoT application framework with native Azure integration

We see our IoT solutions as enablers for new business models and as a long-term basis for your digital roadmap. The prerequisite for this is an IoT framework, which can be flexibly and easily scaled to new requirements and at the same time allows fast, cost-effective implementation of initial IoT use cases.

### **With CENTERSIGHT scale, we combine the best of both worlds:**

We link services provided by Microsoft Azure with the ready-to-use IoT applications of CENTERSIGHT scale and thus enable a fast time-to-market of your IoT projects. At the same time, we create openness, flexibility and scalability with the self-sufficient and multidimensional building blocks of CENTERSIGHT scale – also for your requirements of the future.

**Pave the way for our successful IoT business model – with the combination of Microsoft Azure and CENTERSIGHT scale.**

### **Why customers use our solution**

- **Fast time-to-market**

CENTERSIGHT scale's ready-made IoT components combined with native integration in Microsoft Azure enable you to quickly implement initial IoT use cases within a few weeks and achieve an immediately visible ROI.

- **Flexibility and openness**

New functionalities and features can be added easily. The IoT solution grows with your individual requirements, without the functional limitations of a predefined SaaS solution.

- **User-centric**

CENTERSIGHT scale's building blocks can be customized to your use case and your users' needs – true user focus instead of feature overload.

- **Data sovereignty and design freedom**

We offer you CENTERSIGHT scale in a flexible subscription model that not only guarantees you full sovereignty over your data, but also gives you the option of operating your IoT solution completely independently. Full design freedom instead of vendor lock-in.

# CENTERSIGHT scale

## Features and applications

### Ready-to-use UI framework

Dashboarding, asset and user management, trend views and search function – intuitive, flexibly extendable and with multilingual support

### Dashboards

Individually configurable dashboards per asset and asset group with numerous widgets

### Trend analyses

Easy visualization of time series by selecting arbitrary time ranges and data points

### Fleet management

Individual and transparent dashboards over the entire fleet or fleet parts, visualization of status information, events and position data

### Multidimensional master data management and modeling

Extensive master data management, flexible grouping of assets (asset groups) and modeling of complex data structures

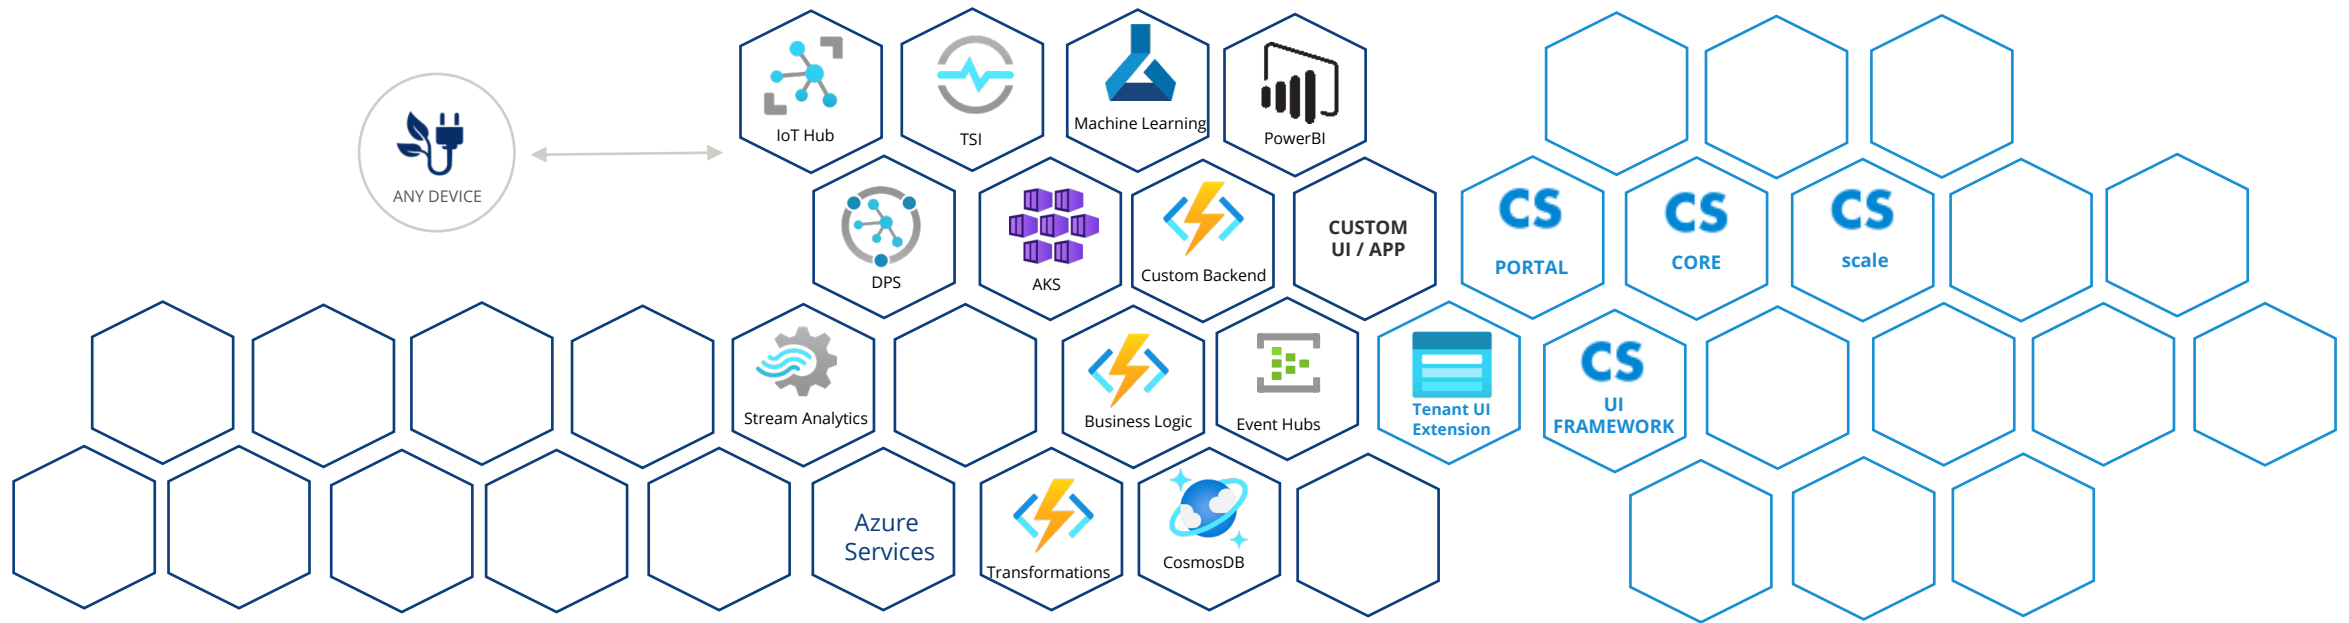

### Role and rights management

Easy management of access rights for users and user groups according to specific role definitions
