

Do You Know Your Software Inventory?

On a scale from 1 to 10, how confidently can you answer the right hand questions?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1	2	3	4	5	6	7	8	9	10

How many different software programs and vendors are in use in your company?

How many functional redundant software is in use in your company?

Do you take into account the standardization of different software versions during your consolidation process?

SOFTWARE PORTFOLIO MANAGEMENT

GREATER TRANSPARENCY · GREATER SECURITY · LOWER COSTS

Can you answer the abovementioned questions with certainty? If so, how much effort would you have to invest into generating this data? If you can't, perhaps it's time to look for a better solution. Imagine if you could clearly identify your installed software and obtain the data prepared at the push of a button – all completely automated for more than 15,000 vendors and 1,250,000 releases!

SOFTWARE PORTFOLIO MANAGEMENT

The Key to Sustainable Transparency:

YOUR BENEFITS

1. **Reduce software costs** by sustainably lowering purchasing conditions for example bundling vendors and software functions, locating unneeded software and verifying editions needed. Automatic recommendations provide the necessary information to do so.
2. **Optimize operating costs** by lowering support and training expenditure. Reduce maintenance and support contracts and lower the number of incidents through a uniform patch level. An easy to use portal simplifies recurring tasks.
3. **Identify security gaps** by gaining an overview of software products which are no longer supported. Identifying unauthorized software, such as games, and profit from an automated analysis of the installed patch level (comparison of actual to available patch version).
4. **Obtain transparency** for making informed decisions on software use. Ad-hoc reports enable a fast analysis before contract negotiations and form the basis of sound business cases. Identify potentials and risks and meet decisions based on facts!

According to IT analyst Gartner, companies can reduce their software expenditure by up to 30% by using software portfolio management measures. In a host of projects and service environments, we have also found that a software analysis holds enormous potential for increasing information security.

UPGRADE YOUR LICENSE MANAGEMENT AND SOFTWARE INVENTORY, NOW!

GREATER TRANSPARENCY WITH PORTFOLIO MANAGEMENT PLATFORM

Do you already have a software inventory tool in use? That's a solid basis for downstream software portfolio management. In a proof of value, we evaluate the connectivity options to our software identification system. We can also make use of our own inventory solution as a completion.

Let the proof of value show you the benefits of our Portfolio Management Platform:

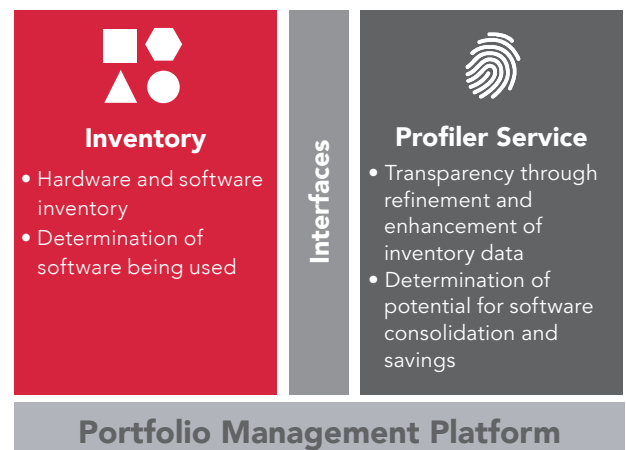

DATA REFINEMENT

- Hardware and software inventory both in the client and in the server environment
- Consolidation of 'suite installations'
- Software identification, including numerous characteristics (e.g. version, edition, language and license type)
- Automated comparison of installed versions and patches with the latest market data
- Identification of suspicious and non-business software
- Classification and categorization of software (e.g. security and graphics)

Shed new light onto the information you collect and take advantage of our growing business intelligence platform to identify and analyze the software products you use. Various reports enable a 360° analysis of the software used. We can also support you during the processing phase from a risk and opportunity analysis, as well as creation of business cases right up to the presentation of 'ready-to-go' decision proposals.

Get to know the added value you'd gain with Portfolio Management Platform.
As part of a proof of value you receive:

- Support with the installation on (virtual) machine & linking to the inventory
- Analysis of up to 50% of clients and servers in the Portfolio Management Platform
- Presentation of the identified quick wins and potentials based on reports
- Offer for operation of the Portfolio Management Platform and consultation to tap the identified potential
