

Transcoding an entire documentary library and adding DRM in just 3 days

Overview

Giloo, Taiwan's largest documentary streaming service for the Mandarin-speaking world, needed to find a way to transcode hundreds of hours of feature-length documentaries and protect content via Hollywood-grade DRM in less than a week. Under a tremendous time constraint, Giloo approached KKStream for help.

KKStream ingested and transcoded Giloo's entire documentary library into a digital format compatible with a studio-approved DRM system, ensuring full protection for copyrighted content.

About BlendVision VOD Streaming

BlendVision VOD Streaming is an easy-to-use and powerful Online Video Platform, which offers advanced per-title encoding and adaptive streaming for on-demand videos.

Win Results
