REEKOH

The IoT Fabric for Smart Cities

Smart Cities are often characterised by small and isolated projects with siloed data separated from business processes and applications.

The technology-aspects of smart cities are layered and complex, with decision makers who are looking at implementing solutions being faced with a fragmented landscape of devices, networks, security models and end-to-end applications all attempting to deliver valuable and effective outcomes for stakeholders.

Reekoh's IoT Fabric data platform is built to reduce complexity, increase interoperability and enable solutions from early stage trials through to production for smart city customers, vendors and solution providers.

Taking an open, vendor-agnostic integration approach to connecting and orchestrating data workflows that underpin unique smart city projects means that a return on investment can be made across the full life cycle of solutions.

City Business IT & Operational Systems (Existing and New)

REEKOH
Smart City Data Fabric

Vendor Agnostic   Agile   Future-Proofed   Open Frameworks   Data & API Management

Smart Lighting
Smart Transport
Public Safety
Smart Water Management
Smart Parking
Smart Grid
Smart Buildings
Smart Waste Management
Digital Connectivity
External Open Data
Smart Infrastructure

Creating a Smart City Fabric which can make use of Open Data, and be built upon by relevant vendors in key solution areas is important to maintain a focus on citizen outcomes and data insights, rather than applications and technology.

Integrating IoT and Business Technology

Reekoh is the leading platform for IoT Data and API Management. Our open frameworks and suite of tools including flow-based data integration design, security and rapid data visualisation, enables enterprise and government customers with an agile and scalable capability for delivering IoT solutions and strategies.

With teams across Australia and Asia, and global partnerships across the full range of IoT solution components, Reekoh is accelerating enterprise IoT adoption across all industries and verticals.
