

CONNECTED WORKPLACE

ConXioN
The new style of IT

Your workplace, available anywhere in a secure way

WHAT

ConXioN's Connected Workplace introduces **Azure Virtual Desktop** en **Windows 365** into your organization and offers you a more efficient, productive and secure approach to desktop (and app) virtualization. The Connected Workplace allows you to move your desktops and/or apps on premise to the safety of the cloud, in a unique Microsoft Cloud environment.

Multiple users can use the same virtualized Windows 10 or Windows 11 environment, without compromising on user experience or functionalities.

Key Points

Automatically patched and secured, with possibility to activate MFA for layered security

Access from anywhere on any device

WHY

Users can work from a platform and device of their choice (smartphone, tablet, desktop, laptop running on Windows, Mac, iOS, Android or any other device with an HTML5 web client) in a Windows 10 or Windows 11 environment. This means that every user can enjoy Office 365 apps as they would on a locally hosted desktop. The seamless integration also means that users benefit from the full Microsoft Teams experience for audio or video calling, OneDrive, and many more.

The Microsoft Azure cloud enables greater scalability, as customizations to your infrastructure can be made easily. Additionally, multiple users may be able to work in the same Windows 10 or Windows 11 environment at the same time. This means that you no longer pay too much: you only pay for what you use and can get rid of unused desktops.

One of the greatest assets of Windows Virtual Desktop is its security. Windows Virtual Desktop allows you to benefit from secure sign-on, with the option to activate Multi-Factor Authentication. On top of this, all individual and company data are securely stored in the cloud and no longer on personal devices. This means that your data will not be compromised in case of theft or damage. Furthermore, the role-based access protects data.

3 benefits

Confidential information or files do not get stored on individual devices

Save costs and time: no need to upgrade or replace hardware and fewer on-premise investments

Optimized for Windows 10 or Windows 11 and Microsoft 365

HOW

It is important to address the transition to Windows Virtual Desktop **step by step**. Of course, this is a process tailored to you as a customer, and in addition to the pure implementation of the Azure Virtual Desktop of Windows 365 with Office 365, we also look at security, collaboration ... depending on what other goals you want to achieve. We also think about migration of any older applications to the cloud and any new third-party possibilities.
