

## Provision and manage cloud devices with Microsoft Endpoint Manager

Get endpoint security, device management, and intelligent cloud actions in a unified management platform.

With the shift to remote work, IT and Infrastructure teams need to provision and manage devices remotely. Management outside the corporate firewall brings new challenges for device security, updates, application access, and administrative control.

Microsoft Endpoint Manager provides automated provisioning and management for Windows 10, MacOS, iOS, and Android devices. With capabilities for application management, update management, policy configuration, security configuration, and resource access, Microsoft Endpoint Manager provides holistic management of corporate devices on/off the network.

**Cyclotron's Endpoint Manager** provides an introduction, education, and production-ready framework for IT teams to revolutionize their device management strategy.

Cyclotron helps accelerate device provisioning and management in a cloud-first approach.

- Automated, hands-free device provisioning using Autopilot, Apple Business Manager, and Android Enterprise
- Strategies for personal and corporate devices
- Application deployment, management, and protection
- In-depth, best-practices security configurations
- Real-time actions on remote devices
- Remote provisioning and re-provisioning of existing hardware

### Native support for:

- Password-less sign-in
- Self-service password reset
- Self-service BitLocker key retrieval
- Office 365/Azure AD identity
