Ambra Health’s cloud VNA capabilities make it easy to integrate images into patient portals, EHRs and HIEs, consolidate multiple systems, and lower storage costs, all while providing industry leading business continuity as standard.

CONSOLIDATES SYSTEMS. REMOVES COMPLEXITY.

The costs of licensing and maintaining on-premise VNAs and PACS, image exchange software, CD burning, separate disaster recovery products and storage solutions all add up. With Ambra Health, it’s no longer necessary.

With a single all-in-one cloud solution, we help organizations save 30%-80%+ by consolidating applications, removing integration and manual effort between them, and cutting on-premise application maintenance.

INTEGRATES WITH PORTALS, HIES AND EHRS

Ambra Health is already embedded in some of the world’s leading EHR systems and enables physicians with a 360-degree view of not just patient information, but medical images too, in one system. Plus, powered by our APIs we easily embed in portals to enable patient and referring physician self-service, integrating image management with affiliated outpatient practices throughout your network.

DISASTER-RECOVERY BUILT-IN.

Why pay extra for disaster-recovery, when you can have it for no extra cost, built-in to your VNA? Ambra Health manages and backs up your images in our secure data centers, providing physical security and redundancy, off-site back-ups, and 24/7 monitoring. With SSAE 16 SOC 2 compliance, you gain the assurance of strong controls and policies around managing images that far-exceed what can typically be achieved on-premise.
**The Cloud VNA of Choice for the World’s Largest Health Systems:** Memorial Hermann Runs Ambra Health

**ABOUT**
Texas's largest integrated delivery network, with 13 hospitals, 200 facilities, and 5,500+ active staff physicians, the nation’s busiest Level 1 trauma center.

**METRICS**
With Ambra Health, Memorial Hermann is managing a large network of 175+ exchange members, with over 13M+ studies shared, and adding 2M+ studies per year.

**BENEFITS**
- Automated image routing
- Reduced traditional media
- Business continuity and backup
- Image-enablement across all apps
- Eliminated duplicate studies

---

**Proven to Enable Imaging Centers:**
Jefferson Radiology Runs Ambra Health

**ABOUT**
Largest radiology private practice in Connecticut, diagnostic and therapeutic, with 10 offices and 7 hospital affiliations.

**BENEFITS**
- 30%+ cost savings
- Replaced 4 applications
- Anytime, anywhere image access
- Referring physician satisfaction

“*Ambra Health is our active repository enabling business continuity, and dramatically simplifying image exchange while reducing costs.*”

- MIKE QUINN, CTO

**IMAGE LIFECYCLE MANAGEMENT WITHOUT THE HASSLE**
Implementing image retention policies is often a manual process, with the risk of images slipping through the gaps. Our image lifecycle management (ILM) capabilities make it simple to manage image deletion and retention using rules based automation. We make it easy to automate the removal of images from the system based on any set of specified set of user configurable criteria.
