Partnerships

We are Premier Partner and have the Managed Service Provider (MSP) competency audited by Microsoft.

Our high level of partnership and specialization demonstrates and attests to our focus, technical capacity and excellence in execution.

We represent our customer and use a neutral perspective to determine the most appropriate cloud technology for everyone's needs.

Our Team

We have a highly **qualified technical team** due to knowledge and experience acquired with the migration and management of thousands of environments.

This daily immersion in cloud technologies attests to our experience not only in cloud technologies, but also in other technologies that **make the environment**.

Our team has the ability to deliver the customer journey through the cloud **with excellence** from planning, architecture, migration and continuous management of these environments.

Main Customers

A photograph of three business professionals in a meeting. A woman on the left is gesturing with her hand while speaking. A man in the center, wearing glasses and a dark blazer, is smiling and looking at her. A woman on the right is listening attentively. They are seated around a table with papers, a pen, and a glass of water. The background shows a window with a view of a building.

Our Services

Our Services

Microsoft 365

Professional Services

They guarantee excellence in the adoption of specific workloads regardless of the Microsoft 365 adoption cycle.

Managed Services

They support companies in the complete adoption of Microsoft 365 on an ongoing basis and guarantee excellence from the implementation, migration to the adoption of advanced workloads.

Azure

Professional Services

From migration to optimization of environments, Professional Cloud Services ensure safe and efficient environments in performance and costs.

Managed Services

The managed services promote the continuous management of cloud environments, ensuring a modern, high-performance, optimized environment and efficient cost management.

Data

Professional Services

Enable organizations to become more agile in the way they access and share data and incorporate external data sources.

Managed Data Services

Support data environments ensuring the integrity, availability and security of data while maintaining cost control.

Managed Infrastructure Cloud Services

Managed services support the adoption of cloud technologies and continuously support infrastructure and data environments.

Data Team

Why did we create a Data team?

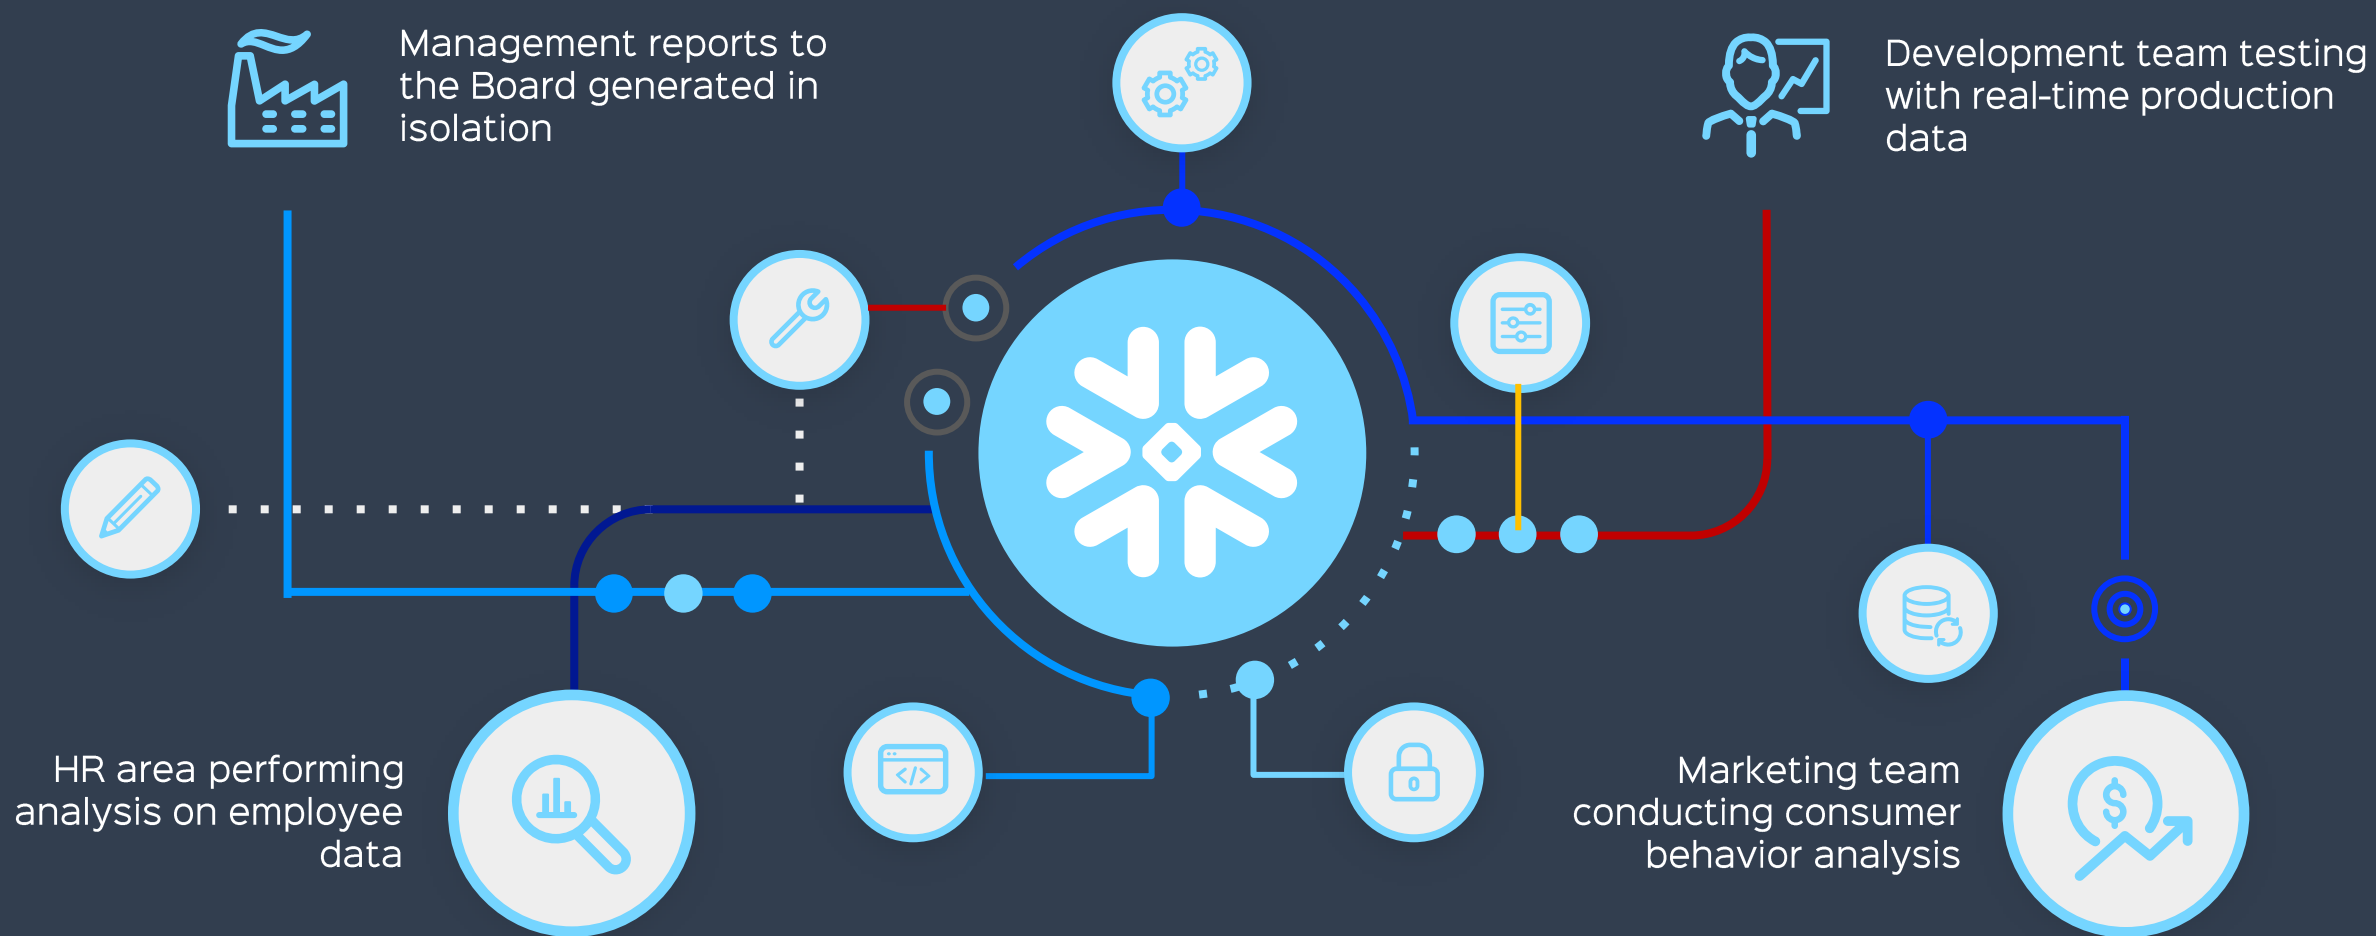

Of Data Projects
Fail

Reasons:

- ✓ Managers think that it is solved in a simple way, only with money and technology;
- ✓ Lack of collaboration between the various teams and areas involved;
- ✓ **Difficulty in accessing the correct and treated data;**

Modern Data Environment

Data Management and Dedalus Cloud Infrastructure

A photograph of three business professionals in an office setting. A man with a beard is looking at a computer monitor, with his hand on his chin in a thoughtful pose. A woman is looking at the same monitor. Another man with glasses is partially visible in the foreground, also looking towards the screen. The image has a blue tint and a semi-transparent dark blue overlay at the bottom.

- Financial Analytics
- Legal/Law Analytics

Assessment (Business and Technical)

Identification of the company's current moment according to the Dedalus Data Framework

Professional Services | Data

General Assessment

- Dedalus Data Framework Presentation;
- Current moment identification of the company according to the Framework;
- Understanding the demands from the Business point of view;
- Assistance the company in the elaboration of its Data Strategy;
- Show the manager the importance of all stages of the process.

Professional Services | Data

Migration

- **Assessment:** assessment to understand the scenario complexity;
- **Load Tests/ Sizing:** meet performance and availability objectives and define the best migration strategy;
- **Performance Optimization:** possible optimizations in the company's current environment;
- **Migration (Cloud):** carry out and support the migration to the cloud, between clouds or between different engines.

Professional Services | Data

Data Engineering

- **Assessment:** understand the scenario complexity;
- **Data Lake Structuring:** centralize files from all data sources;
- **Data Warehouse Structuring:** analytical data relevant to the business;
- **Semantic Layer Structuring:** data processing and availability;
- **Architecture Optimization:** recommending ideal architecture for the business.

The data engineer is concerned with preparing the data for consumption by the data scientist. It operates in all stages, including collection, format definition, dimensioning, availability, security, among other activities.

Professional Services | Data

Data Science

- **Assessment:** understand what stage the client is in and its complexity;
- **Business Intelligence:** extract insights about the business, study about what happened;
- **Machine Learning (ML):** create and apply predictive models, study on what might happen;
- **Artificial Intelligence (AI):** automate action based on the study of what might happen.

Professional Services | Data

Data Driven

- **Analytics by Business Units (BU):** marketing analytics, people analytics, sales analytics, financial analytics, among others;
- **People Analytics:** data collection and analysis applied to people management;
- **Sales Analytics:** data collection and analysis applied to business management (customer relationship, marketing campaigns, etc.);
- **Financial Analytics:** data collection and analysis applied to financial decisions;
- **Legal / Law Analytics:** data collection and analysis applied to legal demands.

This is the final stage of the journey, where the company reaches the ideal status with all the infrastructure and technology necessary to support management and decision making, positively impacting the business.

A group of people in a modern office setting, some sitting at a table with laptops, others standing, engaged in a meeting. The scene is dimly lit with a blue tint, suggesting an evening or indoor lighting. The background features large windows and a bookshelf.

Centre of Excellence

Centre of Excellence Performance

Connecting, people and technologies cooperating to exploit their maximum potential.

- ✓ Comprised of a multidisciplinary team of specialists in cloud computing, AI / ML, DevOps, migration, databases, big data, Analytics and data visualization;
- ✓ Focus on Data & Analytics;
- ✓ Reference architectures implemented for demonstrations.

A group of business professionals in a meeting. In the foreground, a man with glasses and a beard is smiling while typing on a laptop. Behind him, a woman with curly hair is looking at the laptop. Further back, a man with a mustache is also looking at the laptop. To the right, a woman with glasses is smiling and looking towards the group. The background shows a modern office setting with large windows.

Cases

Combining technology with medicine to protect high-risk newborns

Developed system that is resident in the cloud, where the immense amount of data is also stored.

Company

PBSF is a company formed by a group of specialists that aims to disseminate, facilitate and apply neuroprotection and neuromonitoring methodologies in high-risk newborns. The company's objective is to promote the concept of Neurological Neonatal ICU.

Situation

Very expensive storage, difficulty in dealing with integrating software, organization of each data source, merging of information, creating a robust architecture.

Solutions

Architectural design focused on data storage and processing, preparing the solution for possible real-time analysis, scalability, isolation and high availability. Use of Data Lake to centralize data, replacing backup processes, using correct partitioning to organize information by data source and dates.

Data
Engineering

Ensure the success of your project and the best results with the support of those who understand more about cloud computing and data services in Brazil and Argentina.
