Build Cross-Platform Mobile Apps with Wintellect and Xamarin

Mobile apps are a necessity in today's digital age in order to achieve maximum reach, and they need to run on all the popular devices. With Xamarin, you're able to code once, and then deliver native iOS, Android, and Windows apps that work across all major devices and form factors. This decreases your development time and speeds up your time-to-market. You also lower your cost of development and cost of resources.

Wintellect specializes in cross-platform Xamarin mobile development, and is a certified Xamarin Premier Consulting Partner. Our engineers are Xamarin-certified developers with broad mobile experience and a deep understanding of the Xamarin platform.

Why Xamarin for your business

✓ **Accelerated time to market.** Quicker time to market with 60-100% shared code across platforms.

✓ **Lower TCO.** Smaller teams. No need to hire separate developers for each language, reducing cost of ownership.

✓ **User experience.** Create flawless user experiences across all major platforms: iOS, Android and Windows.

✓ **Complete mobile solution.** The Xamarin platform includes development tools, emulation, testing, analytics, education and support.

✓ **Always up-to-date.** Deliver to your customers via the Apple, Google, and Windows App Stores.

"Simply put, Wintellect rocks! True professionals delivering professional results."

-- Ed Sieja - Software Architect, Intergraph Corporation

Xamarin
PREMIER CONSULTING PARTNER

Wintellect's Xamarin Services
