

Managed Sentinel – Security Monitoring

Securely run and grow your business

Monitor against security threats

Go beyond built-in security controls existing in your environment and be protected against identity compromise, while automatically identifying potential breaches before they cause damage.

Monitor business data against leaks

Use cloud applications without putting company information at risk by adding protection, ranging from access privileges to data encryption.

Be informed on who has access to business information

Monitor company and BYOD devices to ensure compliance, automatically detect suspicious activities, and quickly be alerted when to block, quarantine, or wipe compromised devices.

Business savvy way to reduce risk

Managed Sentinel – Security Monitoring provides a simple, cost-effective way to reduce risk with cutting-edge Azure Cloud Security tools to securely run and grow your business.

Get started today with your Managed Sentinel Security Monitoring

As your partner, we will provide the guidance, recommendations and best practices to keep your business data safe from both internal and external threats with a simple, cost-effective solution.
