Conditional Access Workshop

mobile mentor

How are you going to deploy Conditional Access policies without upsetting your users?

Conditional Access Workshop is an assessment and planning service.

Finding the right balance between endpoint security and employee experience is always hard – especially with a remote workforce.

Too much security compromises the user experience, too little security compromises the entire business.

Mobile Mentor can help you to achieve the right balance between security and user experience with our Conditional Access Workshop.

A good migration plan will ensure you are successful

Our Conditional Access Workshop is based on this proven process:

- **Assessment** -The first steps is an assessment workshop where we perform technical discovery to understand your environment and business objectives.

- **Design** - Taking the information from step one, we will produce a draft design and review it with you to gather feedback and resolve questions.

- **Knowledge Transfer** - We perform a knowledge transfer to your IT team and discuss best practices and your options for implementation and rollout to your employees.

1 Step One
Assessment

2 Step Two
Design

3 Step Three
Knowledge Transfer

Get Started Today

Avoid alienating your users with too many restrictions and controls. That only encourages people to find insecure work-arounds.

Conditional Access is an important part of a zero-trust architecture.

Mobile Mentor is a Microsoft Gold partner, and our engineers are certified by Microsoft, Apple and Google. You are in safe hands.
