Application Migration Planning for Cloud

Data-driven analysis for successful migration

Application Migration Planning for Cloud is an objective, data driven analysis that prepares a client for a successful Azure migration. Migrating to Azure to achieve all of its benefits requires a comprehensive review of the applications you want to migrate.

What is Application Migration Planning for Cloud?

Organisations are interested in migrating but confused by the choices available.

It takes years of experience to understand the advantages and disadvantages to various migration methods. It is vital that the chosen method align with each client's business objectives and the realities of their current-state deployment.

Migrating hundreds of applications is a daunting task.

We streamline the assessment process and provide objective, data-driven analysis to identify endpoint suitability and application migration patterns.

Why customers use the Application Migration Planning for Cloud service

- Knowing which application are most appropriate for Azure
- Understanding what applications should be moved to Azure first
- What is the appropriate migration pattern for each application
- The most practical roadmap for a successful Azure migration

Right platform

- Public Cloud: Azure
- Private Cloud: Azure Stack
- On-Premises: Virtualised, containerised

Application cost efficiency

Migration pattern

- Re-host
- Re-platform
- Refactor
- Replace, retire, retain

Application disposition

Roadmap

- Migration schedule
- First movers/Quick wins
- Top-down view of migration of migration planning

Migration time and effort

Application Migration Planning for Cloud: the tooling and analysis to create a roadmap for successful Azure migration

Outcomes

Application Migration Planning: Analysis

- Guidance on endpoint suitability across platforms (public cloud, private cloud, on-prem)
- Identification of migration patterns for all applications - the 6Rs (rehost, re-platform, refactor, replace, retire, and retain)
- Identification of application "First Movers"
- High level roadmap & top-down view of migration planning
- Insight into the effort it will take to manage applications across your portfolio

Application Migration Planning for Cloud

Our promise to you

This service helps our clients determine the migration strategy for each of their targeted applications, using our proprietary IP tools and client specific rules for analysis and data-driven objectivity.

Driving successful migrations

- Application-oriented approach: We consider each application instead of only looking at a client's environment from an infrastructure perspective
- Intellectual property and tooling: We accelerate our client's migration to Azure using our proprietary tools and datadriven objectivity

Tangible Benefits/Desired Outcomes

- The best endpoint (Azure, Azure Stack, on-premises) for each application
- The most appropriate migration pattern for each application
- Which applications should be first movers
- The most practical roadmap for a successful migration

Why Leaven?

Leaven enables New Zealand organisations to accelerate cloud and digital transformation.

We apply proven methodologies to enable your organisation to adopt public cloud services, innovate on the foundation they provide, and optimise and manage your environment, while maintaining governance and compliance requirements.
