

# Customer Success Story

## **UK structural steel manufacturer and engineering company mitigates security threats with an MCAS review from Silversands**

Bourne Group provides structural steel and engineering expertise which is used for some iconic buildings around the world.

Expert Microsoft partner Silversands recommended a 5 day Threat Protection Review utilising the power of Microsoft's Cloud App Security tool

- £5k, 5 day review
- 2018
- Construction, manufacturing, engineering

## Win Results

### **Microsoft Cloud App Security Analysis findings**

Following an onsite meeting to scope this review we identified:

Lack of visibility in cloud systems, unexpected data access, account security and access problems, no control or validation of mobile devices, no control or monitoring of cloud data use.

### **Onsite report presentation and recommendations**

Based on our finding Silversands recommended:

MFA, SSPR, Conditional Access, Intune MDM, Microsoft Cloud App Security monitoring, reporting, and remediation.

"Silversands threat protection review enabled us to significantly enhance security across our entire estate, exposing vulnerabilities we were unaware of and confirming others we had suspicions about. The outcomes have already protected us from multiple attacks."
