

Leverage our technology to facilitate superior network flow throughout key video-based events.

About Hive Video Distribution

Hive Streaming is a force multiplier designed to take your live and on-demand video capabilities to a whole new level. Our video distribution will reach and optimize your entire corporate network, maximizing the video experience for users and bringing HD live and on-demand video to your people wherever they are. No other company or tool can provide the same level of engagement and adoption when it comes to large scale video experiences within a company network.

How do I know if Hive is right for me?

Get your company network ready straight away to host large-scale video events. There's nothing to build as we use your existing infrastructure to deliver seamless corporate video experiences with greatly reduced bandwidth requirements. With Hive Video Distribution you can reach your entire workforce with large-scale optimized video experiences that promote better employee engagement and far healthier internal communications.

If complaints about poor video quality, dropouts or limited accessibility with your current network are consistent and/or growing

If you're worried about your network's ability to handle large, internal broadcasts

If your existing infrastructure is holding you back from fully embracing a premium video experience

If you're planning next year's big video strategy and intending on delivering a reliable, secure and comprehensive video solution

If excessive buffering and weak connection is preventing you from taking your internal communications to the next level.

If you'd like near instantaneous access of the next video solution available with no deployment needed

What's included?

Budget Security

This add-on is important for customers who are unsure of their video consumption rate and want to avoid incurring overage charges if they exceed their budget. Budget security covers up to 50% above the subscribed plan's budget, e.g. 15,000 views for the 10,000 annual views plan.

Hive Agent

Grants customers the right to leverage peer-to-peer technology through the patented Hive java agent installed on employee workstations that allow the agent to run.

Hive Client

Grants firms the power to leverage peer-to-peer technology through the execution of an open script on employee workstations that run stream events on a WebRTC platform.

Hive Video Distribution is video delivery solution that secures and optimizes video distribution from source to end-user regardless of workplace location or existing infrastructure.

It is a software-only solution and comes pre-integrated with Microsoft Teams and Stream platforms, meaning setup is quick and simple - or 'Fire and forget', as we say. It includes the Hive Live Dashboard, allowing you to track and monitor your events in real-time. Do not expose your communication or leave employees behind—instead, ensure secure, stable and absolute reach with best possible video viewing experience.

Views definition

A view is an event where a viewer opens a live streamed or Video-On-Demand asset. After closing the event, the viewer has up to 30 minutes to view the event again for it to count as the same view, otherwise the second instance will count as another separate view.

Pricing

Our consumption rates are tailored to fit typical video consumption based on your firm's employee headcount.
