

# Manage your delegated authority business more efficiently with Tide

Tide provides a single, centralised, highly automated way of managing bordereaux

In today's market, insurers receive a huge number of bordereaux. Data varying in format, quality and completeness, makes it challenging for businesses to consume, process, validate and interrogate the risk and claims data supplied to them.

Businesses spend unnecessary time, effort and cost, manually checking, validating, rationalising and extracting this data for processing and for Coverholder performance.

Tide addresses these market challenges providing a cloud based solution which delivers a centralised bordereaux transformation, processing and repository platform.

Tide can ensure your delegated authority data is received, on time, in a complete, standardised, compliant and contractually compliant format, stored in a single location.

## Tide delivers real business benefits

- **Establish** consistent processes across your business
- Help to ensure data is **contractually viable**
- **Eliminate duplication** and reduce work effort
- **Simplify and standardise** data cleansing
- **Single version** of the truth
- **Make informed decisions** using complete and consistent information
- **Reduce cost** through automation

**Submit bordereaux for standardisation  
24/7 from anywhere in the world**

# Submit bordereaux in just three clicks with Tide

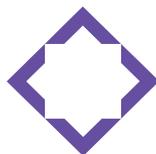

Tide allows you to report, interrogate and analyse your data and make more informed business decisions

### Cloud hosted

SaaS platform hosted in the Azure cloud providing security 24/7

### Roadmap

Full details and visibility of upcoming releases

### Self service

Manage own company and user access along with data standards and knowledge base

### Reporting

Powerful operational and MI reporting capabilities including out of the box or bespoke reports

### Service assurance

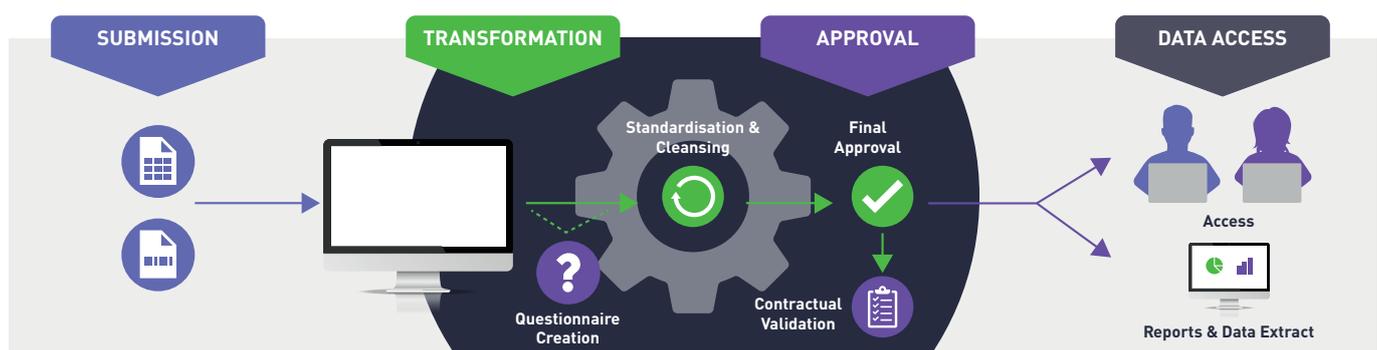

Automated testing suite prior to deployment and regular penetration and performance testing to ensure Tide stays secure

### Data security roles

Define the roles for administering processing and approving bordereaux

## Tide, supporting the delegated authority journey

Easy & intuitive access for third parties to submit their data

Simple, one time only questionnaire approach  
Suggested data enrichments and corrections  
Ever increasing automation

Optional final sign-off  
Automated contractual validation

Operational & MI reporting suite  
Data extract function
