Digital Workplace Accelerator Workshop

Coreio offers a free 2-hour workshop to discuss your Workplace technology and how you can enable a 'Digital Workplace' that is built on the Microsoft platform, and is managed and supported using modern tools and best practices.

Challenges

While Windows 10 and Microsoft 365 have been around for a few years now—a few key challenges continue to be a hurdle for enterprises to truly leverage the platform to enable a Digital Workplace.

Some of these challenges include:

1) Adoption of cloud-native collaboration

Many of Microsoft's modern collaboration platforms (Teams, SharePoint, etc.) are still under-utilized and under-leveraged. As with all new technology, best practices are still evolving, which means customers are still trying to find the optimal environment for their employee needs.

2) Data Management

A key feature of Microsoft 365 is the migration of user data to the cloud, which comes with huge benefits in terms of productivity, reliability and cost efficiencies. A holistic collaboration and data strategy is key to achieving these benefits.

3) Information Security and Cyber Risk

With a large proportion of the workforce working remotely, users are now exposed to an ever-increasing onslaught of cyberattacks that endanger sensitive data and assets. End point security, combined with supporting Information Security policies and procedures are key to mitigating this risk.

4) IT Operations and Support

A key challenge of the Digital Workplace is to manage and support a distributed workforce seamlessly, an aspect that has evolved by leaps and bounds on Windows 10 and Microsoft 365.

Audience

The workshop is intended for IT Leaders and Managers who are responsible for their organization's workplace technology strategy and infrastructure management.

Outcomes

The workshop will achieve the following key outcomes:

- An appreciation of the Digital Workplace and how it can truly enable and empower a distributed, hybrid workforce

- A high-level review of client's workplace technology and how it measures against industry best practices

- Key benefits of the Digital Workplace and how to develop a value-based business case

Agenda

- Introductions

- Overview & Key components of the Digital Workplace

- How Azure can help in going truly cloud-native—authentication, security, data and collaboration

- Benefits & Value and how to develop a Business Case

- Table-top review of client's Digital Workplace around 10 key topics

- How Coreio can help
