# Master data management & Enterprise Information Integration

Centralized platform to manage and share master data and business information (orders, delivery notes, invoices...) between systems.

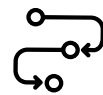

PLATAFORMA EII

- PORTAL E-Commerce
- INTEGRACIÓN DE DATOS MAESTROS
- INTEGRACIÓN DE DATOS
- DATA GOVERNANCE
- Gestión Producción
- CRM
- RRHH
- ERP

GOAL

Company needs a **central and fully managed system** for the exchange of information between systems.

From **master data** (customers, companies, products, accounts...) to **business information** (orders, invoices, stocks...).
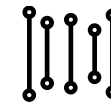

STRATEGY

- Integrated data platform
- Non-assisted platform
- General connectors for data integration.
- 0 development for new integrations.
- Data Warehouse Integration.
- Complete monitoring and auditing functionalities.

RESULTS

- ✓ Simplified architecture.
- ✓ Lower costs and efforts for new integrations.
- ✓ Better platform management.
- ✓ Fewer incidents.
- ✓ Better monitoring and auditing.
- ✓ Better information for analysis thanks to data Warehouse Integration.

Over 200 data flows

Over 70 different systems

More than 90 types of business information and master data.

Over 10 different interfaces between systems.

More than 20 different data exchange formats.

From near real-time to weekly data integration.
