## WHO ARE WE

## One of the nation's leading providers of IT talent and solutions

Founded in 2003, Intellectual Capitol (ICAP) quickly became one of South Carolina's most trusted suppliers of technology talent solutions for government agencies and large, private institutions. Today, ICAP is a leading provider of software and consulting solutions for nationally recognized firms in a diverse array of industries, including: Manufacturing, Hi-Tech, Finance, Healthcare, Higher Education, and Government Agencies. ICAP's ability to deliver scalable, transformational technology solutions can be attributed to its early strategic focus on government and large institutions (and their enterprise system requirements), its ability to develop strong partnerships, and the company's deep network of exceptional talent.

As the needs of our clients have evolved, so have we. ICAP remains a leader in talent acquisition services, delivering meaningful work for our consultants, and maintaining strong retention rates for our clients. Today, ICAP also specializes in the development of cloud-based custom software solutions for a variety of nationally recognized brands, helping clients solve a variety of challenges. Additionally, ICAP offers a broad portfolio of consulting services on topics such as organizational development, risk assessment/ mitigation, and CIO advisory. ICAP has been named to the Inc. 5000 list five years in a row and has also been named one of South Carolina's 25 fastest growing companies.

We are ICAP, solutions for your most critical software, consulting, and IT staffing needs and we connect our candidates with work that matters.

### Claims Engine

Claims Engine is an incredibly flexible platform which represents a framework of claims mana gement administration utilizing modern cloud-based technology to improve delivery and service. The core functionality of Claims Engine incorporates a web-based interface that allows data capture through client-specific forms, 24/7 access, configurable workflows, and communication tools with powerful and flexible reporting. Claims Engine utilizes an off-the-shelf configuration model, which allows Claims Engine Software to leverage proven core functionality combined with precise configuration to meet the needs of any Workers' Compensation entity.

#### **ADOS**

Avery Dennison worked with Capitol Software to migrate their business systems (Inventory, Production, Finance & Logistics) from a Legacy technology platform to an industry standard Microsoft.NET platform. We deployed a select team of our lead developers, who had key experience in high output manufacturing and enterprise technology solutions to stabilize their core business systems in order to convert them to a new platform. Our small team was able to meet the 12 month completion goal and successfully stabilized, modernized, and integrated the client to the new platform.

### Citadel

The Citadel needed an integrated, enterprise-level, singular solution to track their cadet's (student) experience and modernize their decades-old manual process. Using a SCRUM/Agile Approach, the Capitol Software team determined that the Citadel needed a fully custom platform, migrating from their paper-based system. The team developed The Cadet Accountability System or "CAS," a web delivered system that can be accessed by any electronic device and has optimized productivity and database tracking across the campus. CAS is the first and only web delivered system focused on military educational institutions.

#### **Tlinks**

Tlinks is a consortium of over 120 golf courses, country clubs, hotels, resorts, and travel agencies located throughout the Southeast. Their leadership team contacted Capitol Software to build a custom enterprise-level solution. Our team built a fully integrated platform that would address all the needs of this wide variety of business stakeholders using Custom Application Development. Upon the Go-Live date, all stakeholders could schedule and pay for golf tee time reservations in a single system across the entire Tlinks enterprise.
