

Migration Accelerator for SharePoint

Make your migration simple with Proventeq's Migration Accelerator

Migration Accelerator, the content migration tool from Proventeq, not only smoothly migrates your business content from your existing enterprise content management platform but allows you to gain the maximum value from your information by ensuring its new home is truly optimised for productivity, collaborative working and business growth.

Migration Accelerator maximises the potential of your content and information management infrastructure throughout each stage of your migration project, and is the perfect migration tool for high-volume, complex content migration projects where integrity, continuity and enrichment are a priority.

Before migrating to SharePoint

Gain Actionable Insights

Identify critical content and scale your new content architecture accurately with advanced discovery, analysis and reporting functions.

Negate Risks

Stay on schedule and within budget with intelligent pre-migration checks to pre-emptively identify

potential risks to your project. Helps identify potential issues when moving into SharePoint due to technical constraints e.g. maximum URL length, invalid characters, blocked file sizes, blocked file types etc. These can be identified in advance and the migration can be configured to address these prior to load into target.

Enrich & Restructure Your Content

Give your content the context you need with enrichment via classification, IA remapping, metadata & taxonomy.

During your migration to SharePoint

Maintain Business Continuity

Minimise departmental downtime thanks to high-speed, incremental migration and reusable scheduled tasks.

Transform How You Work with Content

Enable your workforce to work with all content types, even handwritten documents, thanks to advanced OCR and format conversion.

Seamlessly Enforce Compliance

Migration Accelerator's customisable rules give you the power to ensure compliance with your internal and industry standards by applying the right retention and sensitivity labels.

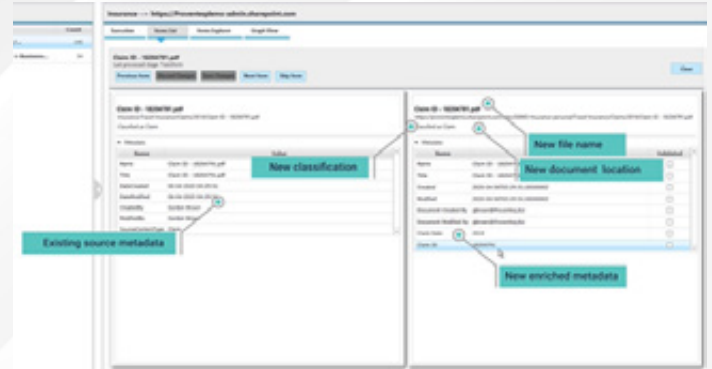

Intelligently Classify Your Documents

Intelligently classify the ever-increasing volume of unstructured information created by your business every day. Allows mapping of categories from the source system to the content types configured in the target system.

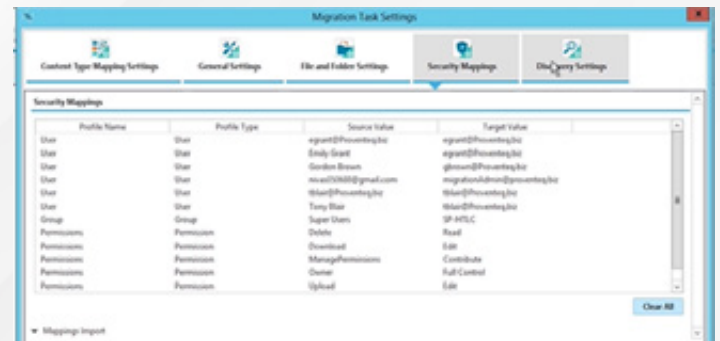

Enrich metadata of content in the target using advanced rules-based transformation

Allows setting of metadata values in the target based on easy to configure rules. The metadata values can either come directly from the source system or computed as part of the rules. Write custom rules using PowerShell and extend the possibilities of enhancing the content and metadata.

Map users, groups and security

Map active or inactive users and groups from source to active users in a target. Preserve content security by mapping access rights.

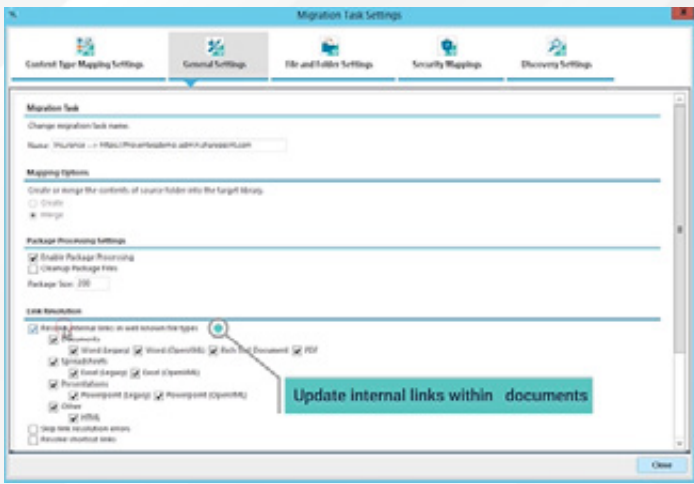

Restructure content hierarchy

Reorganise content into different locations in the target. Restructure existing hierarchy to meet current business needs or consolidate content from deep nested hierarchy into a simpler structure.

Manage links

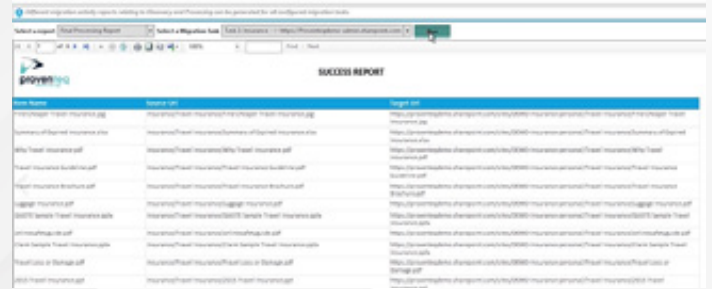

Update source system proprietary hyperlinks inside the document with SharePoint links to keep the links active post-migration.

Avoid content duplication by migrating linked content or multi-filed content (single document filed/linked from multiple folders) as a link to document within SharePoint.

Full audit reports

Proventeq Migration Accelerator provides item level audit reports and Exception reports.

Simulation run to validate rules and outcome

Save time by testing the outcome of rules prior to migration using a simulation run.

Achieve High Performance & Scalability

Accelerate your move to a better business future by migrating millions of items a day using our scalable, high-throughput engine.

After migrating to SharePoint

Reduce downtime with incremental (delta) migration

Expedite go-live with minimal downtime achieved using incremental migration

Integrate Your Content Portfolio

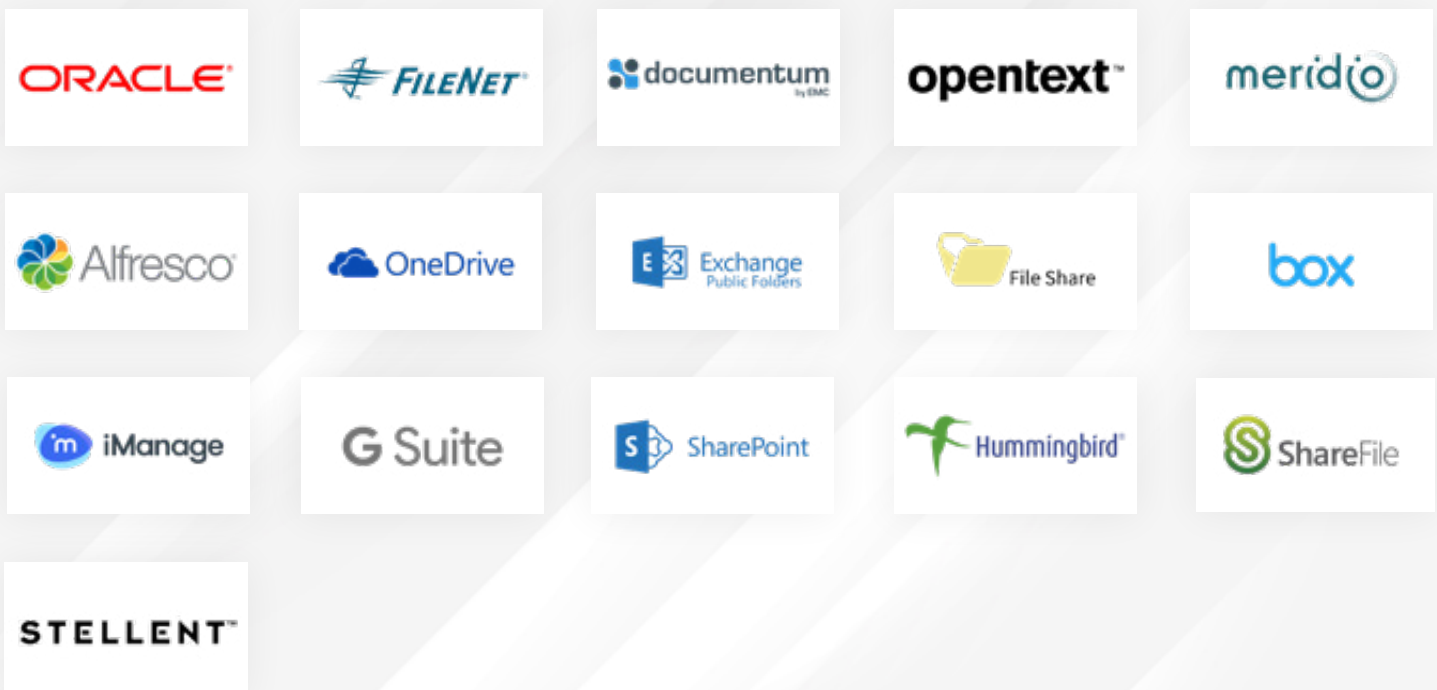

Want to keep an existing system live after migration? Consolidate content from multiple source systems and repositories easily and quickly.

Improved User Productivity

Exploit the potential of your content through optimised IA and searchability and turn your information into your most powerful business asset

Supported Systems

Testimonials

A unique and complex migration, with problems solved in flight in order to deliver successfully. We have validated that the entire content has been migrated. Return on investment has been proved in terms of our ongoing DfE savings, having moved from Echo Meridio

Philip Humphries

Head of Knowledge & Information
Department for Education

Moving to Office 365 was a key component of our on-going plan to centralise and improve accessibility and gain more meaningful insights from our business and scientific data. Working closely with Proventeq as our specialist technical partner, we were able to migrate from our legacy content management platform into Office 365 with confidence

Adam Lythgoe

IT Manager
Business Services, LifeArc

Migrating from a legacy eDiscovery platform to SharePoint, was not an easy task, but Proventeq made it look easy. This project is saving us about \$100,000 in licensing annual cost, 20TB of storage and countless number of hours performing eDiscovery requests using an 8-year-old platform. Everything went smooth, on time and every project meeting was meaningful. O+G and Proventeq are a team of professionals that I would recommend any time, for similar projects

Sorin Bodea

Director of IT Security Operations
AvalonBay Communities

Working with Proventeq allowed us to figure out all of the different mechanics of how to migrate and restructure our data This allowed us to have a clean break and start working immediately in the new system

Honza Cervenka

Internal Project Lead
McAllister Olivarius
