"A unique and complex migration, with problems solved in flight in order to deliver successfully. We have validated that the entire content has been migrated. Return on investment has been proved in terms of our ongoing DfE savings, having moved from Echo Meridio."

Philip Humphries, Head of Knowledge & Information, Department for Education.

DfE's highly customised Meridio enterprise content management system required in-depth analysis and reverse engineering by the Proventeq team to ensure that the design of the migration encapsulated the scope of the project and fulfilled all of the organisation's specific requirements.

Win Results

Complex legacy platform

DfE's entirely bespoke, domain-specific application required reverse engineering due to a lack of internal platform administration expertise.

Inconsistent source metadata

File types & extensions were incorrectly stored, requiring a deep file inspection to determine the correct file types prior to migration to SharePoint Online.

Full text conversion of image scans:

Over 700,000 scanned images needed optical character recognition and full text extraction prior to migration to the SharePoint Online.

LifeArc

"Moving to Office 365 was a key component of our on-going plan to centralise and improve accessibility and gain more meaningful insights from our business and scientific data. Working closely with Proventeq as our specialist technical partner, we were able to migrate from our legacy content management platform into Office 365 with confidence"

Adam Lythgoe, IT Manager, Business Services, LifeArc

A significant restructuring of the file systems and processes was required to align with how records need to be stored and accessed in SharePoint Online.

Win Results

Improved Collaboration And Compliance

Taking advantage of collaborative tools in SharePoint and Teams, as well as the Office 365 suite, Lifearc could create a virtual workplace where teams can meet, collaborate, complete tasks and work on documents centrally.

Significant Cost Savings

By transitioning to SharePoint Online, LifeArc has been able to make significant (up to 80%) cost savings by reducing licensing, infrastructure, and support costs.

More Powerful Administration & Data Loss Prevention

Easier but more powerful administration and management coupled with provisions for Data Loss Prevention to protect LifeArc's academic research.

AvalonBay Communities
Migration from IBM FileNet to SharePoint Online

AvalonBay
COMMUNITIES

**Further Information
on Microsoft Tech Community**

"Migrating from a legacy ediscovery platform to SharePoint, was not an easy task, but Proventeq made it look easy. This project is saving us about $100,000 in licensing annual cost, 20TB of storage and countless number of hours performing eDiscovery requests using an 8 year old platform. Everything went smoothly, on time and every project meeting was meaningful. O+G and Proventeq are a team of professionals that I would recommend any time, for similar projects."

Sorin Bodea, Director of IT Security Operations, AvalonBay Communities

AvalonBay Communities were looking to migrate a large volume of content – i.e. more than 120 million emails and documents – from IBM FileNet P8 to SharePoint Online.

Win Results

$100K Reduction in Annual Licensing

By decommissioning the IBM FileNet and eDiscovery platforms, AvalonBay Communities has been able to make significant licensing and infrastructure costs savings: $100K reduction in annual costs.

Reduction in Storage Costs
Moving to SharePoint and Office 365 has helped AvalonBay Communities save on paying expensive costs on 20tb of storage.

Content Consolidation for eDiscovery

Moving archived content to SharePoint online and Exchange online meant Proventeq were able to reduce the time spent across the organization searching and interaction with their business content.

DLF
BUILDING INDIA

**Further Information
on Microsoft Tech Community**

"The transition to Microsoft Office 365 platform was swift and smooth and it has provided flexible distribution, management and collaboration of content."

Mahesh Mathur, Sr. Vice President, Systems & IT DLF Limited

DLF took the decision to implement SharePoint Online to be able to manage content and information on a granular level; provide staff and external stakeholders with the flexibility of a centralised Content Services solution, and reduce the overall infrastructure costs.

With over 2.4 million content items held in an ageing IBM FileNet P8 instance, and a requirement to minimise business downtime during the migration process, DLF chose Proventeq's Migration Accelerator to discover, analyze, enhance, classify and migrate their content portfolio.

Win Results

Smooth Transition To Sharepoint

The adoption of both a pilot migration which ensured that the proposed strategy met the needs of the project and the implementation of an incremental production migration process helped DLF avoid any costly or time-consuming technical issues.

Reduced Total Cost Of Ownership

Due to an existing investment in Microsoft's Office 365 platform, DLF found that by moving the content out of IBM FileNet P8 and decommissioning the IBM system there has been a significant reduction in the total cost of ownership of their ECM infrastructure.

Robust Information Protection

While overarching control over complex granular permissions had proved problematic in FileNet P8, adoption of Microsoft's Azure Information Protection allows DLF to meet a key goal of achieving granular control of view, read and print permissions on externally-shared content.

McAllister Olivarius

Migration from iManage Worksite to SharePoint Online

McAllister Olivarius

"Working with Proventeq allowed us to figure out all of the different mechanics of how to migrate and restructure our data This allowed us to have a clean break and start working immediately in the new system."

Honza Červenka, Internal Project Lead, McAllister Olivarius

McAllister Olivarius were operating on an iManage Worksite system. The limitation of managing content from four separate divisions and entities within the organisation iManage resulted in the need for a more structured and inclusive online environment.

To address this situation, Microsoft's SharePoint Online product was chosen to provide a complete and extensible Content Services component for the practice. solution.

Win Results

Data Consistency And Reliability

With a high number of legally sensitive files to be migrated, frequent item-level audits were carried out on asset integrity and to preserve important case files, ensuring a flawless degree of data consistency was maintained required to meet the challenges of internal governance and regulatory control.

Practical Content Structure

By tailoring a new structuring system that matched the brief, we enabled McAllister Olivarius to effectively separate content from each of the four entities, which make up the organisation. Additionally, each corporation was disconnected and remapped into its own digital landscape.

More Powerful Administration & Data Loss Prevention

Migration Accelerator's trial function created a detailed map for the content and was able to be completed to an extremely strict timescale, ensuring the switchover did not impact the client's business negatively.
