...on [the soft side of] the Cloud.

petranna™.db

petranna™.db.MySQL in a nutshell

SaaS - ready ™ database

Market need

The increasing penetration of SaaS model constitutes multi - tenancy* the core principle for modern software applications since it offers significant:

- economies of scale & costs minimization

- resources usage maximization

- time-to-market for software products & services

*multi-tenancy: the ability of a SaaS application to serve the same functionality to several customers from one deployment

Solution

"in-a-box" unique managed service on Azure that provides MySQL database service as multi-tenant ready, allowing any number of tenants on the same RDBMS instance & based on:

- codeless implementation & integration

- database agnostic architecture, supporting MySQL, PostgreSQL, MariaDB,SQL Server, Oracle, DB2

Benefit

- costs reductions including infrastructure, software development, maintenance and operations

- multi-tenancy transformation of the data schema in few clicks

- supportability of any number of tenants on the same RDBMS instance

petranna™.db
the only "off-the shelf" service that offers data multi-tenancy and database service "in-a-box"
