

Biometric Authentication

Authenticate returning clients using their facial biometric data within milliseconds

It is easy to authenticate returning clients remotely when you are using a resilient solution that automatically determines the validity of their identities. Feel confident about your customers and keep your remote processes immune to identity fraud.

Our solution ensures the authenticity of your returning customer's physical identity by examining their unique biometric characteristics. This method allows businesses to trust their clients without a shadow of a doubt.

Why businesses use Biometric Authentication?

- Remotely authenticate returning customers
- Protection against advanced deepfake technologies
- Fully automated and customer-friendly experience
- Compatible with any mobile device or platform
- Compliant with the GDPR

Highest Security

- Enhanced sign-in process
- Biometric facial recognition
- AI-based spoofing detection

Advanced certified technologies

Fast and Simple Use

- Client authentication in milliseconds
- Frictionless customers experience
- Customized integration up to 48 hours

Automated remote validation

Complete Coverage

- Wide use-case applicability
- Integrable across devices and platforms
- Reduced costs and resources

An all-in-one solution

"The new solution authenticates returning clients in seconds using their facial biometrics. By receiving the user's selfie, Ondato solution compares its biometric 3D map with the previously saved one, ensuring that it's the same returning person. Biometric authentication has so much potential use cases." – Mindaugas Kvedaravičius, CEO at 200mi
